

Business Requirements Discussion and Approval

A reusable template for business stakeholders and leadership

Initiative

[Enter the business initiative or process name]

Prepared for [Business owner and stakeholders]

Prepared by [Name and role]

Meeting date [Date] Version [Number] Status [Draft / In review / Approved]

Purpose of the discussion

Agree the business need, the outcome that matters and the requirements the team must meet. Use the completed document to confirm scope, assign ownership and request approval to proceed.

Discussion route

Section	Business conversation	Page
01	What needs to improve and why	2
02	Who is affected and how work happens today	3
03	What is included and how work should change	4
04	What the business needs the solution to do	5
05	How we will confirm it works	6
06	What needs a decision or approval	7

Replace the bracketed prompts during preparation or the meeting. Keep open points visible with an owner and due date. All examples are illustrative and require business agreement.

The business need

Start with the business outcome. This page becomes the summary for leadership once the discussion is complete.

What problem are we solving

[Describe the issue, who experiences it and when it occurs]

Why does this matter now

[Explain the impact on customers, teams, turnaround time, quality or cost]

What should be different

[Describe the desired outcome in plain business language]

How success will be measured

Measure	Current position	Target and date
[Measure 1]	[Baseline and evidence source]	[Agreed target and date]
[Measure 2]	[Baseline and evidence source]	[Agreed target and date]

Decision needed from leadership

[State the approval, priority or resource decision and the date needed]

Benefit owner [Name] Business sponsor [Name]

People and the current process

Invite the people who perform the work and those who receive its output. Capture how the process operates in practice.

Stakeholder	Role in the discussion	Name
Business owner	Owns the outcome and priorities	[Name]
Process users	Explain tasks and exceptions	[Names]
System or data owner	Confirms feasibility and data needs	[Name]
Sponsor or approver	Resolves trade-offs and approves scope	[Name]

Walk through the work today

[What starts the work? What are the main steps, systems and handoffs?]

Where does the process become difficult

[Identify delays, repeat work, missing information and common exceptions]

What evidence supports the issue

[Reference examples, volumes, timings, reports or stakeholder feedback]

Prompts for the conversation

Who receives the request? What must be known before work starts? Who makes decisions? What happens when information is missing? How is completion communicated?

For relevant Probo Medical initiatives, consider service intake, equipment identification, evaluation, repair approvals, parts, returns, shipment handoffs or reporting. Confirm which areas apply.

Scope and future process

Agree the boundaries before discussing detailed functionality. Identify the business changes as well as the system changes.

Included in this initiative

[List the processes, teams, sites, data and channels covered]

Outside this initiative

[List exclusions and any work deferred to a later phase]

The future way of working

Stage	Responsible role	Required outcome
Receive and validate	[Role]	[Valid inputs and an accepted request]
Perform and review	[Role]	[Completed work and required approval]
Complete and hand over	[Role]	[Confirmed output and recipient notified]

Rules and exceptions

[What must be checked, who may approve, and when should work stop or escalate?]

Constraints and dependencies

[Record deadlines, budget, resources, other teams and assumptions to confirm]

Process owner [Name] Supporting process map or work instruction [Reference]

Business requirement record

Use one record for each distinct requirement. Duplicate this page as needed and give every requirement a stable reference.

Reference [BR-001] Owner [Name] Priority [Must / Should / Could / Deferred]

Requirement title

[Use a short name that business users recognize]

The business need

[As a [role], I need [capability], so that [business outcome]]

Rules data and access

[Specify required information, allowed roles, decisions and exception behavior]

Acceptance criteria

[Given [starting condition], when [action], then [observable result]]

Source and dependencies

[Who requested this? What evidence or other requirements does it depend on?]

Illustrative example

A service coordinator needs missing request information identified before handoff so that the receiving team can act on the request. If an agreed required input is absent, submission identifies the missing item and prevents the request from advancing. The business owner defines the required inputs and permitted exceptions.

Review status [Proposed / Reviewed / Approved / Deferred]

Decision and date [Record the agreement or remaining question]

Validation and readiness

Agree the evidence that will demonstrate each requirement is met. Include exceptions and access checks as well as the normal process.

Requirement	Business test and expected result	Owner
[BR-001]	[Normal scenario and measurable expected result]	[Name]
[BR-001]	[Missing input or rejected approval and expected result]	[Name]
[BR-002]	[Access restriction or failed handoff and expected result]	[Name]

Test arrangements

[Confirm the environment, representative users, test data, dates and evidence location]

Acceptance threshold

[State which tests must pass, how defects are handled and who accepts the outcome]

Business readiness

Area	What must be ready	Owner and date
Work instructions	[Verified steps, controls and exception routes]	[Name and date]
Training and communication	[Audience, materials and delivery approach]	[Name and date]
Support and measurement	[Support route and benefit review plan]	[Name and date]

Coverage review [Confirm applicable needs for reporting, data quality, access, integrations, performance, accessibility, audit evidence and retention ownership.]

Decisions and approval

Close the discussion with clear actions and an explicit decision. Record conditions and unresolved items before establishing the requirements baseline.

Open questions actions and risks

Reference	Question action or risk	Owner and due date
[Q-01]	[Open question and affected requirement]	[Name and date]
[A-01]	[Action needed before approval]	[Name and date]
[R-01]	[Risk, impact and mitigation]	[Name and date]

Recommendation and decision

[Proceed / Rework / Defer; explain the reason and any conditions]

Business sign off

Role	Decision and conditions	Name and date
Business owner	[Approve / Rework / Defer]	[Name and date]
Sponsor	[Scope and priority decision]	[Name and date]
Delivery or system owner	[Feasibility and dependencies reviewed]	[Name and date]

Managing changes after approval

Record each change with its reason, affected requirement IDs, impact on cost and dates, decision maker and approval date. Update the related acceptance criteria, process map and work instructions, then circulate the revised version.

Approved version [Number] Baseline date [Date]

Next review [Date] Document owner [Name]

Business Requirements Completion Workbook

A complete fillable template for business teams and leadership

Initiative name

Enter the project, improvement or process being discussed.

[Click here to enter your response]

Business owner [Enter name and role]

Prepared by [Enter name and role]

Version [Enter version] Date [Enter date]

Status [Enter Draft, In review or Approved]

How to complete the workbook

Open this document in Microsoft Word. Click a bracketed field and type your answer. Text fields expand as you type. Table rows and pages may grow to fit your responses. Use Save As to create a separate copy for each initiative.

Write Not applicable with a reason when a section does not apply. For an unknown answer, record an open question, an owner and a due date. Duplicate the requirement and work instruction pages for additional items.

Completion route

Part	What the team completes
01 to 04	Business outcome, stakeholders, current process and future scope
05 to 08	Requirements, data, reporting and service expectations
09 to 11	Work instructions, acceptance testing, decisions and approvals

The prompts guide the discussion; they do not state approved Probo Medical processes. Complete and review the workbook with the relevant business owners before sign off.

Business outcome

Describe the business need before selecting a solution. Leadership should be able to understand the case for change from this page.

Problem statement

What is happening today, who is affected and how often does it happen?

[Click here to enter your response]

Business impact and urgency

Describe delays, cost, repeat work, customer impact or missed opportunities. Reference supporting evidence.

[Click here to enter your response]

Desired outcome

What should improve, and what would success look like to the business?

[Click here to enter your response]

Success measures

Measure	Current value and source	Target and date
[Enter measure]	[Enter baseline and evidence]	[Enter target and date]
[Enter measure]	[Enter baseline and evidence]	[Enter target and date]

Benefit owner [Enter name]

Leadership decision required [Enter decision and required date]

Stakeholders and ownership

Identify who supplies information, who owns the process and who can approve requirements or resolve conflicting priorities.

Role	Name and team	Responsibility
Sponsor	[Enter name and team]	[Enter decision authority]
Business owner	[Enter name and team]	[Enter process ownership]
Business users	[Enter names and teams]	[Enter tasks represented]
System or data owner	[Enter name and team]	[Enter review responsibility]
UAT and training lead	[Enter name and team]	[Enter validation responsibility]

Affected teams sites and users

List the locations, user groups and approximate number of people affected.

[Click here to enter your response]

Workshop record

Record the meeting date, participants, source documents and any absent stakeholders whose input is still required.

[Click here to enter your response]

Communication and decision route

How will updates be shared? Who resolves disagreements and confirms decisions?

[Click here to enter your response]

03 / COMPLETE WITH THE BUSINESS TEAM

Current process

Capture how work happens today, including manual activity, system use and handoffs. Use real examples with sensitive details removed.

Process name [Enter name]

Trigger [Enter what starts the work]

Completion point [Enter what ends the process]

Step	Owner	Current action and system	Output or handoff
1	[Enter role]	[Enter action and system]	[Enter output]
2	[Enter role]	[Enter action and system]	[Enter output]
3	[Enter role]	[Enter action and system]	[Enter output]
4	[Enter role]	[Enter action and system]	[Enter output]

Pain points and exceptions

Where does work wait, repeat or fail? What happens when inputs are incomplete?

[Click here to enter your response]

Volumes and supporting evidence

Record typical and peak volumes, elapsed times, frequency and evidence references.

[Click here to enter your response]

Existing procedure or process map [Enter reference or Not available]

Scope and future process

Agree what will change and what will remain outside this initiative. Confirm ownership at each future handoff.

In scope

List included activities, teams, sites, channels and business records.

[Click here to enter your response]

Out of scope

List explicit exclusions and items deferred to a later phase.

[Click here to enter your response]

Future step	Owner	Required result and handoff
1	[Enter role]	[Enter activity, result and receiver]
2	[Enter role]	[Enter activity, result and receiver]
3	[Enter role]	[Enter activity, result and receiver]

Business rules and exceptions

State approval conditions, required checks, rejection paths and escalation rules.

[Click here to enter your response]

Constraints assumptions and dependencies

Record budget or date constraints, assumptions to validate and work needed from others.

[Click here to enter your response]

Detailed requirement

Complete one page for each requirement. Use the same requirement ID in the register, test scenarios and work instructions.

Requirement ID [Enter BR number]

Title [Enter short business title]

Owner [Enter name] Priority [Enter Must, Should, Could or Deferred]

Requirement statement

As a role, I need a capability so that a business outcome is achieved.

[Click here to enter your response]

Rules inputs outputs and exceptions

What information is required, what should happen and what should happen when the normal path cannot continue?

[Click here to enter your response]

Acceptance criteria

Given a starting condition, when an action occurs, then what observable result must occur?

[Click here to enter your response]

Source rationale and dependencies

Who requested this, why is it needed and which other requirements does it depend on?

[Click here to enter your response]

Status [Enter Proposed, Reviewed, Approved or Deferred]

Decision or unresolved point [Enter decision or question]

Related test and work instruction IDs [Enter references]

Requirement register

Use this register to track the full set of requirements. Add rows as needed and retain the IDs when scope or priorities change.

ID	Requirement summary	Priority	Owner	Status
[BR ID]	[Enter summary]	[Enter priority]	[Enter name]	[Enter status]
[BR ID]	[Enter summary]	[Enter priority]	[Enter name]	[Enter status]
[BR ID]	[Enter summary]	[Enter priority]	[Enter name]	[Enter status]
[BR ID]	[Enter summary]	[Enter priority]	[Enter name]	[Enter status]
[BR ID]	[Enter summary]	[Enter priority]	[Enter name]	[Enter status]

Priority decisions

Which requirements are essential for the first release? What can be deferred and why?

[Click here to enter your response]

Conflicts and dependencies

Identify requirements that conflict, overlap or depend on another decision or delivery.

[Click here to enter your response]

Priority definitions

Must: required for the agreed business outcome. Should: important but a temporary alternative is acceptable.

Could: useful if capacity allows. Deferred: explicitly outside the current delivery scope.

Register owner [Enter name] Last reviewed [Enter date]

Data access and integrations

Capture what information is needed, who may use it and how it moves between systems. Confirm details with the relevant owners.

Data item	Source and owner	Required checks
[Enter data item]	[Enter source and owner]	[Enter validation and quality rules]
[Enter data item]	[Enter source and owner]	[Enter validation and quality rules]

Access and approval rights

Which roles may view, create, edit, approve or complete work? What restrictions apply?

[Click here to enter your response]

Integration and failure handling

Name the sending and receiving systems, event or timing, information transferred and the owner of failed transfers.

[Click here to enter your response]

Data migration audit and retention

Is existing data needed? Who validates it? What evidence and approved retention requirements apply?

[Click here to enter your response]

Data owner review [Enter reviewer, date and remaining actions]

Linked requirement IDs [Enter references]

Reporting and service expectations

Describe the information needed to manage the process and the measurable operating expectations the solution must meet.

Report or measure	Audience and purpose	Definition and frequency
[Enter name]	[Enter users and decision supported]	[Enter calculation, filters and frequency]
[Enter name]	[Enter users and decision supported]	[Enter calculation, filters and frequency]

Report visibility and delivery

Who needs access, at which level of detail, and how will report access be checked?

[Click here to enter your response]

Performance availability and recovery

Specify expected response times, operating hours, peak demand and acceptable recovery times with owners.

[Click here to enter your response]

Usability accessibility and support

Describe user needs, device or location constraints, accessibility requirements and the support route.

[Click here to enter your response]

Related requirement IDs [Enter references]

Agreed service targets reviewed by [Enter name and date]

Process and work instructions

Complete one page per task. Validate the steps with a person who performs the work before treating the instruction as approved.

Instruction ID and title [Enter WI number and title]

Performer [Enter role] Related requirement [Enter BR ID]

Trigger [Enter starting event]

Prerequisites [Enter access, inputs and prior approvals]

Step	Action to perform	Expected result or evidence
1	[Enter one specific action]	[Enter how success is checked]
2	[Enter one specific action]	[Enter how success is checked]
3	[Enter one specific action]	[Enter how success is checked]
4	[Enter one specific action]	[Enter how success is checked]

Exception and escalation

When should the user stop? Who resolves the problem and how is the resolution recorded?

[Click here to enter your response]

Completion and handoff

What must be verified, where is evidence stored and who receives the completed work?

[Click here to enter your response]

Validated by [Enter name and date]

Procedure owner and review date [Enter name and date]

Acceptance testing and readiness

Define the business tests and the people who will confirm the outcome. Include the normal path, exceptions and access checks.

Test and BR ID	Scenario and expected result	Tester and outcome
[Enter IDs]	[Enter normal path and expected result]	[Enter name, result and evidence]
[Enter IDs]	[Enter exception and expected result]	[Enter name, result and evidence]
[Enter IDs]	[Enter access test and expected result]	[Enter name, result and evidence]

Test arrangements and acceptance threshold

Confirm environment, dates, representative data, required test coverage, defect thresholds and acceptance authority.

[Click here to enter your response]

Training communication and support readiness

Who needs training? What materials and support arrangements must be ready, and who owns them?

[Click here to enter your response]

Release and benefit review

Record required readiness approvals, the planned handover and when benefits will be measured.

[Click here to enter your response]

UAT owner [Enter name] Business acceptance date [Enter date]

Actions decisions and approval

Resolve or explicitly accept outstanding issues. Approval establishes the business requirements baseline for the agreed scope.

Type and ID	Item and impact	Owner and due date
[Question ID]	[Enter question and affected requirement]	[Enter name and date]
[Risk ID]	[Enter risk, impact and mitigation]	[Enter name and date]
[Action ID]	[Enter action and expected outcome]	[Enter name and date]

Decision and approval conditions

Record Approve, Rework or Defer, the reason and any conditions that must be satisfied.

[Click here to enter your response]

Approver role	Name and decision	Date and approval reference
Business owner	[Enter name and decision]	[Enter date and reference]
Sponsor	[Enter name and decision]	[Enter date and reference]
System or delivery owner	[Enter name and review outcome]	[Enter date and reference]

Version and change record

Approved version [Enter version] Next review [Enter date]

Change summary [Enter affected requirements and reason]

Impact and approval [Enter cost or date impact, approver and date]

After approval, record scope changes before implementation. Update affected tests and work instructions and circulate the revised version to the named stakeholders.
