

ARCHITECT CLOSURE REVIEW

RMA Updates Must Preserve Asset Qualification Attributes

Production Case: 00009998

DevDO Tracking Case: 00010703 - Closed

Prepared: September 1, 2026

Environment: Probo Medical DevDO sandbox

Review Status: DEVDO PASS | READY FOR PRODUCTION DEPLOYMENT/UAT

Architect determination: DevDO passed. The implementation is ready for Production deployment and business smoke testing. Keep Production case 00009998 open until those two gates complete.

1. Production Case Summary

Field	Verified value
Subject	System behavior where updating an RMA
Production status	Claimed
Priority	Medium
Business issue	Updating Quality Issue Details, Root Cause, or Corrective Action on an RMA removed key asset attributes.

2. Root Cause and Resolution

Root cause: The RMA receipt/update branch in P_RMATriggerHandler explicitly cleared Cosmetic Rating, Functional Rating, and Review Status while resetting other check-in evaluation fields.

Preservation rule: Removed the three destructive assignments so Cosmetic_Rating__c, Functional_Rating__c, and Review_Status__c remain unchanged.

Existing behavior retained: Repair Evaluation, repairability flags, functional notes, and cosmetic notes continue to reset as before.

Scope control: The change is limited to P_RMATriggerHandler; no data backfill and no Production write were performed.

No-hardcoding control: No Salesforce IDs or business configuration values were introduced. The change removes destructive assignments and relies on existing object relationships.

3. Steps to Reproduce and Validate

Execution boundary: Perform these steps in DevDO with non-production test records. Repeat in Production only after the Change Set is deployed and the business owner authorizes the smoke test.

Preconditions: Use DevDO test data and an authorized RMA user. Prepare a Product Item with Cosmetic Rating = A, Functional Rating = B, Review Status = In Review, and at least one other check-in evaluation field populated.

Step	Action
1	Open or create an RMA linked to the prepared Product Item and confirm Date Item Received is blank before the test.
2	Populate or update Quality Issue Details, Root Cause, and Corrective Action on the RMA.
3	Set Date Item Received to the current test date and save the RMA so the receipt/update branch executes.
4	Refresh the linked Product Item and review Cosmetic Rating, Functional Rating, Review Status, and the other check-in evaluation fields.

Expected result and defect signature: Fixed result: Cosmetic Rating remains A, Functional Rating remains B, and Review Status remains In Review; the other intended check-in evaluation fields reset. Original defect signature: the three preserved fields become blank.

4. Verification Evidence

Focused regression: P_RMATriggerHandlerTest.testDateItemReceived_TriggersProductItemResetBlock

Acceptance assertion: Cosmetic Rating remains A, Functional Rating remains B, and Review Status remains In Review after the RMA received-date transition; the other evaluation fields still reset.

Evidence	Result
Deployment validation	0Afik0000000WpWSAU - 16/16 components deployed; 13/13 deployment-gate tests passed
Final regression rerun	707iK00000005xkHQAQ - 14 tests passed; 0 failures; 100% pass rate
Focused handler coverage	P_RMATriggerHandler focused coverage: 83%
DevDO tracking case	00010703 - Closed and independently read back

5. Story-Specific Change Set Scope

Component type	API name	State
Apex Class	P_RMATriggerHandler	Modified
Apex Test	P_RMATriggerHandlerTest	Regression assertion

Outbound Change Set: DEVDO Next 4 High Priority Fixes (0A2iK00000001lh) - 16 components; not uploaded

Production safety: The Change Set has not been uploaded or deployed. Production metadata and Production case status were not changed.

6. Closure Gate

Gate	Status	Required evidence
DevDO implementation complete	YES	Components deployed and active in DevDO
Automated regression passed	YES	Test job 707iK0000005xkHQAQ
Outbound Change Set prepared	YES	0A2iK00000001lh; 16 components
Production deployment	NO - PENDING	Upload, validate, and deploy the Change Set
Production business smoke test	NO - PENDING	Execute the case-specific acceptance path
Close original Production case	HOLD	Close only after both Production gates pass

Final recommendation: DevDO work is complete and the sandbox tracking case is correctly closed. Move the original Production case to Ready for Production/UAT; do not mark the Production issue resolved until deployment and smoke-test evidence are attached.
