

ARCHITECT CLOSURE REVIEW

SRI Completion Must Not Remove a Dispatched Appointment from the Gantt

Production Case: 00009589

DevDO Tracking Case: 00010705 - Closed

Prepared: September 1, 2026

Environment: Probo Medical DevDO sandbox

Review Status: DEVDO PASS | READY FOR PRODUCTION DEPLOYMENT/UAT

Architect determination: DevDO passed. The implementation is ready for Production deployment and a Field Service scheduling smoke test. Keep Production case 00009589 open until the appointment remains visible on the Gantt in Production.

1. Production Case Summary

Field	Verified value
Subject	SA removed from Gantt when SRI completed
Production status	New
Priority	Medium
Business issue	Completing SRI-00015817 moved SA-17132 from its scheduled state back to Internal, removing it from the Field Service Gantt.

2. Root Cause and Resolution

Root cause: The asynchronous SRI Flow evaluated a relationship snapshot and hard-set the Service Appointment to Internal, allowing an appointment that had since advanced to Dispatched to regress.

Fresh state read: The Flow now re-queries the current Service Appointment before evaluating whether any status transition is allowed.

Configurable transition: An active Service_Appointment_Status_Rule__mdt record maps Pending Customer Authorization to Internal.

Regression prevention: If the current appointment is Dispatched, no matching rule exists, so the Flow performs no status update.

No-hardcoding control: The trigger and target statuses are stored in Custom Metadata, not embedded in the Flow. The Flow does not contain Salesforce record IDs.

3. Verification Evidence

Focused regression:

ProboNextFourFlowRegressionTest.case00009589DispatchedAppointmentDoesNotReturnToInternal

Acceptance assertion: Creating the SRI against a Dispatched Service Appointment leaves the appointment status as Dispatched after asynchronous processing.

Evidence	Result
Deployment validation	0Afik0000000WpWSAU - 16/16 components deployed; 13/13 deployment-gate tests passed
Final regression rerun	707iK0000005xkHQAQ - 14 tests passed; 0 failures; 100% pass rate
Focused handler coverage	P_RMATriggerHandler focused coverage: 83%
DevDO tracking case	00010705 - Closed and independently read back

4. Story-Specific Change Set Scope

Component type	API name	State
Flow	On_Create_of_SRI_Check_if_SA_status_needs_to_be_updated	Active
Apex Test	ProboNextFourFlowRegressionTest	Regression assertion
Custom Metadata Type	Service_Appointment_Status_Rule__mdt	Included
Custom Fields	Active__c; Trigger_Status__c; Target_Status__c	Included
Metadata Record	Pending_Authorization_To_Internal	Active

Outbound Change Set: DEVDO Next 4 High Priority Fixes (0A2iK00000001lh) - 16 components; not uploaded

Production safety: The Change Set has not been uploaded or deployed. Production metadata and Production case status were not changed.

5. Closure Gate

Gate	Status	Required evidence
DevDO implementation complete	YES	Components deployed and active in DevDO
Automated regression passed	YES	Test job 707iK0000005xkHQAQ
Outbound Change Set prepared	YES	0A2iK00000001lh; 16 components
Production deployment	NO - PENDING	Upload, validate, and deploy the Change Set
Production business smoke test	NO - PENDING	Execute the case-specific acceptance path
Close original Production case	HOLD	Close only after both Production gates pass

Final recommendation: DevDO work is complete and the sandbox tracking case is correctly closed. Move the original Production case to Ready for Production/UAT; do not mark the Production issue resolved until deployment and smoke-test evidence are attached.
