Update QCP logic for Start/End Dates for stepped-up pricing

[EPIC] StepUp - QCP

Sprint:

Sprint 19: 8/10 - 8/21, Sprint 20: 8/24 - 9/4

Story Points:

3

User Story:

Users should be able to enter the Subscription Term for each stepped up pricing quote line group and have the Start and End Dates be visible on the group header. They should not populate them themselves as part of MVP. The system should ensure no overlaps in dates or dates past contract terms.

The Quote Line Groups used for stepped up pricing will each have separate Start and End Dates. There must be automation that populates these fields by default for the users, so that there are no gaps or overlaps in dates between groups, and that the final group's end date aligns with the quote's subscription term.

Requirement Detail:

Based on new reqs from Kirk 8/12, the original design details are no longer accurate. Users will enter the Subscription Term for each stepped up pricing quote line group. The Start and End Dates will be visible on the group header but they should not populate them (MVP).

Use apex or flow upon Save/Quick Save to populate the Start and End Dates of each Group based upon the Quote's Start Date and the Subscription Term of each Group.

The user cannot set the Subscription Term of the final group to extend past the quote's end date.

Errors are thrown if the user tries to manually adjust any start dates that do not maintain a continuous subscription term.

When the Opportunity's Contract Start Date is populated by Legal, the Quote's Start Date is updated to that date. This means that the Start and End Dates on the Groups will have to be updated to align based on the Subscription Term of each Group.

NOTE: The Group field Allow Product Ramping identifies when a quote line group is being used for stepped up pricing vs when it is not. That field must be included in this

logic, so this only applies to stepped up pricing.

This automation should be applicable for New and Renewal quotes for stepped up pricing. Amendments are out of scope for MVP

Design Detail:

Users enter Subscription Term values in each Group for stepped up pricing (Allow Product Ramping = True) on New and Renewal Quotes:

Upon Save/Quick Save, the Group and Quote Line Start and End Dates are populated by taking the quote's Start Date and adding the number of whole months indicated by the Subscription Term to calculate the End Date.

The next Group's Start Date is the prior Group's End Date + 1

Need validation to throw errors if:

-- the calculated end date of the final group doesn't align with the end date of the quote. This can also be based on the sum of the Groups' Subscription Terms not matching the Quote's Subscription Term. This applies to both scenarios - when the Groups end before or after the Quote's end date. This error is thrown when attempting to save the quote.

Error message: "The total Subscription Terms of the Ramped Groups must equal the Quote's Subscription Term"

-- you try to change the Start Date or End Date in any of the groups

Error message: To adjust the Start or End Dates, update the Subscription Term in the Group.

@Sunita, is it possible to make the dates not look editable?

Once the groups are created, if the user edits the Subscription Term of any group, the subsequent groups' Start and End Dates should shift accordingly upon Save/Quick Save.

Updates, reflected above:

MV 8/5: Need to have the Group Start and End Dates copy to the quote lines within each group

MV 8/10: All quote lines should have start and end dates. If they are not part of a quote line group, then those dates should match the quote's start and end dates.

Implementation Detail:

1. Created 2 New Formula Fields to make Start Date and EndDate ReadOnly on QL Group Drawer.
 1. Effective StartDate.
 2. Effective EndDate.
2. Added the above two newly created fields to Permission Set: CPQ Sales Permission.
3. Updated the FieldSet Removed the StartDate and EndDate and added Effective StartDate and Effective EndDate.
4. Written 2 Apex Trigger and 1 Apex TriggerHandler and 1 Apex class and 2 ApexTest Class.
 1. QuoteLineGroupTrigger
 2. QuoteLineDateSyncTrigger
 3. QuoteLineGroupTriggerHandler
 4. QuoteLineGroupAsyncHelper
 5. QuoteLineGroupTriggerTest
 6. QuoteLineGroupAsyncHelperTest

Acceptance Criteria:

When quoting using stepped up pricing:

When the group are created, edit the Subscription Term field in each Group header.

When Save or Quick Save is clicked, the Start and End Dates are populated automatically.

Each group's start date defaults to one day following the prior group's end date

Each group's end date defaults to the Start Date plus the number of whole months in the Subscription Term.

The final group's end date must be the same as the quote's end date (if not, an error is thrown)

Editing the start date or end date of any group throws an error

Editing the Subscription Term of any group updates all the following group's start date to be one day following the new date. This update cascades down through all subsequent groups to update the start and end dates that are part of the step up groups.

Check that groups that are not Step Up pricing have the full term date and if they are cloned they continue to have full term dates.

When Opportunity is closed the start/End dates are all shifted to the new Start date before the Order is created.

[Sunita Bhattad](#) in this section of the requirements Error message: To adjust the Start or End Dates, update the Subscription Term in the Group.

Is it possible to make the start and End dates not look editable? like greyed out? Kirk is concerned users will keep trying to do it and submit tickets about getting an error. If possible he would like to prevent them from thinking they can fill those in at all but still wants them visible.

Removed from Design Details - no longer needed:

~~~~~  
Disregard - Original design details:

SB--7/22 : Implementation Plan:

1. Calculate the EndDate on the Quote level, as this is not part of current design. Need to update the Screen Flow
2. Create the price rule to copy the Quote Start date and EndDate to QL Group Level.
3. Dynamic Date Cascading & Term Stamping (QCP onBeforeCalculate)
4. Approx 3 Validation Rule :
  - a. Gap / Overlap Protection: If a user tries to manually edit a group's Start Date to anything other than Prior Group End Date + 1 Day, the system blocks the save and displays an error message requiring continuous, non-overlapping dates.
  - b. Quote Term Exceeded: If a user sets any group's End Date past the overall Quote End Date, the system blocks the save and displays an error message.
  - c. Subscription Term Update: If groups are present on a quote, the system will block users from changing the Subscription Term or End Date at the Quote (header) level, prompting them to remove all groups first if the overall contract term needs to be modified. Since QCP will not recalculate or re-split group dates when you change the quote header term.
5. When Legal updates the Contract Start Date on the Opportunity, the overall Quote Start Date updates accordingly. Each group's duration (measured in exact calendar days) and automatically shifts all group Start and End Dates forward, preserving each group's exact relative duration.— This needs to be done either flow or apex.
6. Start Date and EndDate to be added on the QLGroup Layout.

Hi Team,

Completed testing this ticket in Partial. Validated that the Start and End dates are accurately populated on the QLE for different scenarios, also verified that the Contract Start Date updates the Quote Start date accurately.

Note: This updates are done only for **New Business**. As per Sunita, the Renewal is skipped for this ticket. Amendment is excluded for MVP.
