

Artifacts List / Deployment List

Story: SALDEV-1403 - Update output documents for stepped-up pricing (OmniStudio) | **Target:** FlywirePartial sandbox

Name	Component Name	Component API Name / Record ID	Dependency	Comments
OmniScript	Generate Quote Document - SteppedUpPricing Version 2	Type: CPQ SubType: QuoteDocument Language: English ID: 0jNhG0000000umzUAA	GetQuoteProposalDataSteppe dUpPricing GetDocumentTemplate action CPQQuoteProposalDocuments teppedUpPricing CPQ Quote Proposal template	Active user entry point used to generate/preview the stepped-up pricing proposal. Passes the Quote record ID as ContextId and orchestrates extract, template selection, transform, and document generation.
Data Mapper Extract	GetQuoteProposalDataStep pedUpPricing	ID: 0jIhG0000000GsnUAE Type: Extract Version: 1	SBQQ__Quote__c SBQQ__QuoteLineGroup__c SBQQ__QuoteLine__c Account / Product data	Retrieves quote header, line groups, service start/end dates, group ordering fields, products, quantities, billing frequency, price, description, Rate Details, and Ship-To data. Supports grouped and ungrouped quotes and the final amendment-line exclusion requirement.
Data Mapper Transform	CPQQuoteProposalDocume ntSteppedUpPricing	ID: 0jIhG0000000HX7UAM Type: Transform Version: 1	Output from GetQuoteProposalDataSteppe dUpPricing Word document token model	Builds the document JSON structure for Group and QuoteLine/Line nodes. Produces conditional flags for grouped versus ungrouped output and Multiple Ship-To behavior, while preventing duplicate lines and keeping products under the correct group.
Document Template	CPQ Quote Proposal	ID: 2dtPb0000000BwLIAU Type: MicrosoftWord Mechanism: ClientSide	Transform token model DocumentTemplateContentDo c link OmniScript template-selection action	Active template record. Contains the grouped pricing section, group name/term header, service period, correct product placement, and conditional Ship-To Account column. Preserves the existing layout for ordinary ungrouped quotes.
Template Content	CPQ Quote Proposal - SteppedUpPricing-v5.docx	ContentVersion: 068hG00000330bzQAE ContentDocument: 069hG000003DZfnQAG Template link: 2ddhG0000001bwnQAA	DocumentTemplate: CPQ Quote Proposal Data Mapper output tokens	Final Word content linked to the active template. Displays each group separately, appends Rate Details to Description, shows service periods and term headers, conditionally shows Ship-To, and avoids an empty 'Group 1' section for ungrouped Legal quotes.

Deployment order: 1) Extract Data Mapper 2) Transform Data Mapper 3) Document Template and DOCX content 4) OmniScript version/activation 5) Run the three business test scenarios.

Scope, Validation, and Exclusions

What the story required

- Render quote-line groups dynamically and in the intended order; keep bundle options under the correct parent product.
- Show group name/term header and service-period start/end dates for stepped-up pricing quotes.
- Append Rate Details to the product Description and exclude amendment lines from the generated output.
- Show the Ship-To Account column only when Multiple Ship-To Accounts is Yes.
- Keep the original ungrouped quote layout and do not display an empty Group 1 section.

Business validation completed in Partial

Quote	Scenario	Expected / validated result
Q-37723	Five groups; Multiple Ship-To = Yes	Separate groups, service dates, correct products, no duplicates, and Ship-To Account column visible.
Q-37780	Five groups; Multiple Ship-To = No	Same grouped output with the Ship-To Account column hidden.
Q-37640	Ordinary ungrouped quote	Original product table retained; no group headers, no service-period group section, and no empty Group 1.

Not deployment artifacts for SALDEV-1403

- No new LWC, Flow, Custom Field, Permission Set, or Visualforce component was created for this story.
- CPQQuoteProposalOutputSerializer and its Apex test were experimental validation utilities; the serializer is not attached to the final OmniStudio flow and should not be included in the SALDEV-1403 deployment package.
- SALDEV-1420 email/approval-document OmniStudio assets are a separate story and are excluded from this artifact list.
- Local scripts, JSON patch files, render folders, and handoff reports are engineering evidence only; they are not Salesforce deployable metadata.

Business-User Test Steps

Before testing

- Log in to the Flywire Partial sandbox as a business user who can open Quotes and run the existing Generate Document action.
- Use the Sales Console, open the Quotes tab, and confirm that the active Generate Quote Document - SteppedUpPricing OmniScript is available from the quote action.
- For each scenario, close and reopen the document-generation screen before the next test if the browser retains a cached template or previous Context ID.

Test 1 - Grouped quote with Multiple Ship-To Accounts

1. Open quote Q-37723: <https://flywire--partial.sandbox.my.salesforce.com/a2NhG000002ktrcUAA>
2. Confirm QuoteLineGroupsPresent__c is true, Multiple Ship-To Accounts is Yes, and five quote-line groups exist.
3. Click Generate Document or Generate Quote Document. If the button is not visible, open the quote action drop-down at the upper-right of the record page.
4. Complete the active OmniScript and select CPQ Quote Proposal when a template selection is displayed.
5. Choose Preview or Generate and open the resulting proposal document/PDF.
6. Verify that all five groups appear separately; each group has its name or Term header and service-period start/end dates; products appear beneath the correct group; and no lines are duplicated.
7. Verify that Product, Quantity, Billing Frequency, Description including Rate Details, Price, and Ship-To Account are populated. The Ship-To Account column must be visible.

Test 2 - Grouped quote without Multiple Ship-To Accounts

8. Open quote Q-37780: <https://flywire--partial.sandbox.my.salesforce.com/a2NhG000003EetVUAS>
9. Confirm that five quote-line groups exist and Multiple Ship-To Accounts is No.
10. Run Generate Document / Generate Quote Document, complete the OmniScript, and preview or generate the proposal.
11. Verify the same grouped output as Test 1: correct group order, group/Term header, service-period dates, correct product placement, populated product fields, appended Rate Details, and no duplicate lines.
12. Verify that the Ship-To Account column is not displayed anywhere in the product table.

Test 3 - Ordinary ungrouped quote regression

13. Open quote Q-37640: <https://flywire--partial.sandbox.my.salesforce.com/a2NhG000002YPkPUAW>
14. Confirm QuoteLineGroupsPresent__c is false.
15. Run Generate Document / Generate Quote Document, complete the OmniScript, and preview or generate the proposal.
16. Verify that the normal product table appears and matches the previous ungrouped layout.
17. Verify that no group heading, Term header, grouped service-period section, or empty Group 1 appears.

Pass criteria

- All three documents generate without an OmniScript Document Generation error.
- Grouped quotes render every line exactly once under the correct group and in the intended order.
- The Ship-To Account column follows the Multiple Ship-To Accounts setting.
- The ordinary quote retains its original ungrouped document layout.

Prepared for handoff to David | Current implementation evidence from the FlywirePartial sandbox and the local flywire-docgen workspace.
