

ARCHITECT REVIEW

SALDEV-1475 | OOB Grouped Lines on Amend and Renew

FlywirePartial | Read-only lifecycle investigation and architect assessment

Source	FlywirePartial Sandbox org 00DhG0000000jOXUAY
Test records	Q-37942 Contract 00021743 Q-37946 Q-37950
Review date	28 August 2026
Validation mode	Read-only SOQL and source review; no deployment or record changes
Decision	CHANGES REQUESTED - Ramped result confirmed; required cases remain untested
Boundary	No records, metadata, deployment, activation, or pricing recalculation were changed

ARCHITECT DECISION

Do not close SALDEV-1475 as fully complete. The ramped-group lifecycle is confirmed and matches Salesforce CPQ expected behavior, but the required non-ramped lifecycle case and populated NetSuite-ID case were not executed.

Acceptance outcome

#	Scope	Result	Evidence
1	Subscription group identity	Indirect only	No group ID is stored on Subscription. Lineage is Subscription -> Source Quote Line -> original Quote Line Group.
2	Groups on amendment	No	Q-37946 has five lines, Group Line Items=false, zero groups, and every SBQQ_Group__c is null.
3	Groups on renewal	No	Q-37950 has four lines, Group Line Items=false, zero groups, and every SBQQ_Group__c is null.
4	Final-group assumption	Rejected	Renewal has three Domestic Payments lines mapped to three distinct subscriptions, not one consolidated final-group line.
5	Early renewal timing	Header pass	Although generated before Year 3 starts, Q-37950 correctly covers 24-Sep-2029 through 23-Sep-2030.
6	Non-ramped / NS ID	Not tested	Original data contains only ramped groups; every NS_ID__c is null, so both required behaviors remain unverified.

Observed amendment and renewal path

Salesforce CPQ preserves subscription-level lineage but does not preserve original Quote Line Groups. Flywire custom group-date logic only runs when groups exist.

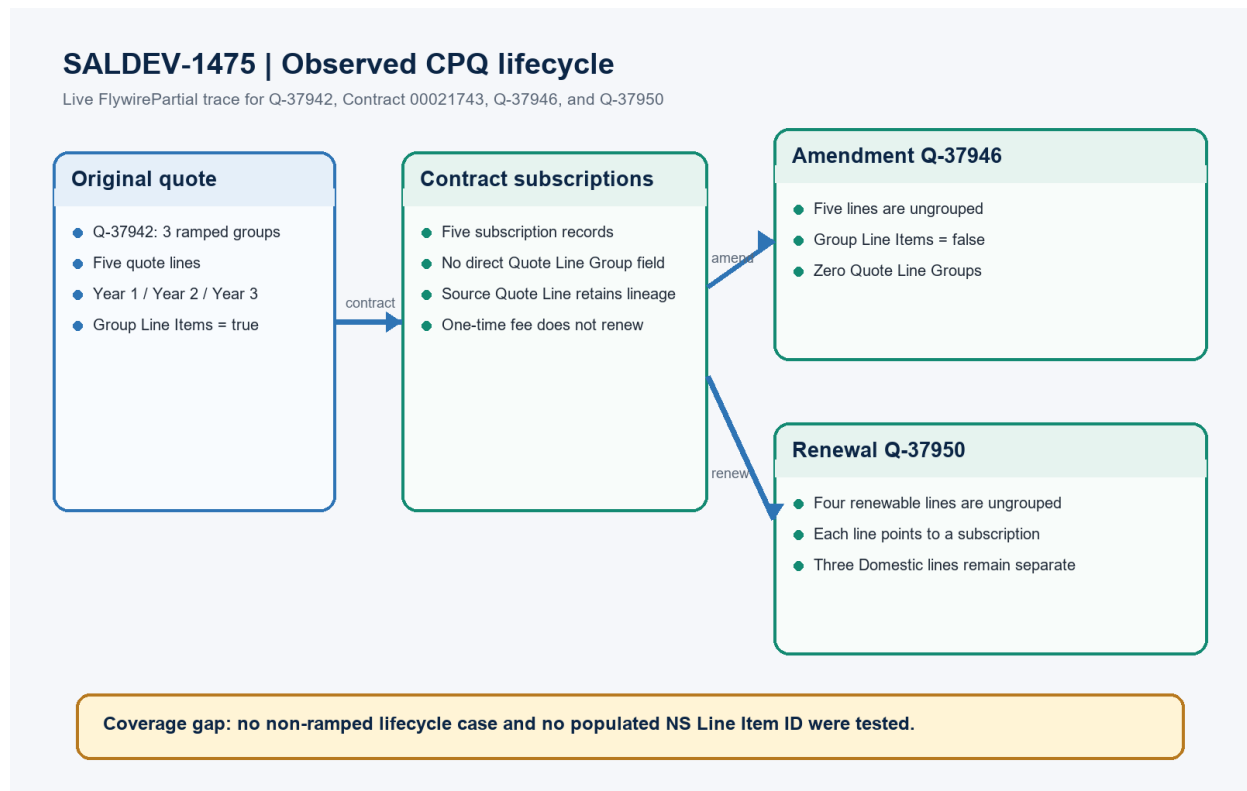

Figure 1. SALDEV-1475 observed CPQ lifecycle in FlywirePartial

DESIGN READING

Green is verified live. Blue is the original quote structure. Amber is required follow-up evidence.

Detailed investigation findings

1. Named-record evidence

Record set	Observed result	Evidence
Target org	FlywirePartial	Org 00DhG0000000jOXUAY; Enterprise Edition sandbox; API 67.0.
Original quote	Q-37942 5 lines	Three ramped groups: SUP Year 1, Year 2, and Year 3; dates span 24-Sep-2026 to 23-Sep-2029.
Contract	00021743 5 subscriptions	Latest End Date behavior; renewal term 12; subscriptions retain source Quote Line links, not group IDs.
Amendment	Q-37946 5 ungrouped lines	All original subscription lines appear, including the one-time implementation fee; no groups were recreated.
Renewal	Q-37950 4 ungrouped lines	Three Domestic Payments lines plus one Platform Fee; one-time Implementation Fee is absent.

2. Exact lifecycle outcomes

Lifecycle stage	Result	Live evidence
Original grouped quote	Verified	Q-37942 has Group Line Items=true, three group records, and all five lines linked to a group.
Amendment quote	Expected OOB	Q-37946 has Group Line Items=false and no Quote Line Group records. Salesforce Help KA 004518583 confirms this is expected CPQ behavior.
Renewal quote	Expected OOB	Q-37950 has Group Line Items=false and no Quote Line Group records; each line links to a renewed Subscription.

3. Price, NetSuite, and coverage findings

Area	Status	Evidence / required action
Renewal lineage	Verified	Each renewal line has SBQQ__RenewedSubscription__c; three Domestic lines map to SUB-0067610, SUB-0067613, and SUB-0067614.
Platform price	Observed	SUB-0067611 supplies Renewal Price 10,000 and NS Billing Price 10,000; renewal line NS Billing Price is 10,000.
Early generation	Observed	Renewal header starts one day after the latest subscription end date. Generation before Year 3 start did not shift the header period.
NS Line Item ID	Blocked	NS_ID__c is null on all five Subscriptions and all renewal lines; populated-ID propagation cannot be concluded.
Non-ramped group	Missing	No Allow Product Ramping=false group exists in the named original quote. Execute the second required contract lifecycle.

Quote group and subscription lineage architecture

Quote Line Group is a quote-only container. Contracting creates independent Subscriptions that retain source Quote Line lineage; amendments and renewals create ungrouped lifecycle lines.

SALDEV-1475 | Identity and renewal lineage

Quote group identity ends at the quote; subscription identity drives downstream lines

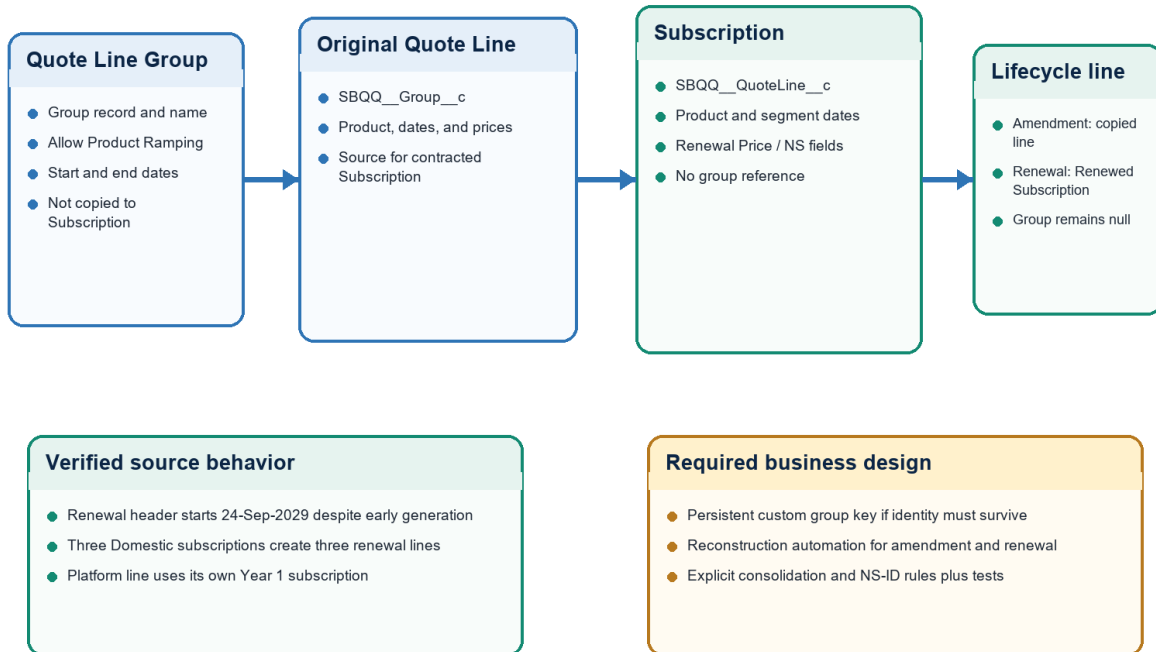

Figure 2. SALDEV-1475 identity boundary and renewal-line lineage

Architect interpretation: the live data and Salesforce guidance agree that groups do not survive amendment or renewal. Preserve identity only through an explicit custom data model and reconstruction design.

Required completion gates

Gate	Required action	Owner	Evidence needed
1	Run non-ramped lifecycle	QA / Developer	Create Allow Product Ramping=false groups, contract, amend, and renew; capture group counts and line-level links.
2	Test populated NS IDs	Integration / QA	Use subscriptions with populated NS Line Item ID and compare subscription, amendment, and renewal values field by field.
3	Confirm renewal intent	Product owner / Architect	Choose whether three stepped subscriptions should remain separate or consolidate to the final commercial period.
4	Define persistent group key	Solution architect	If lifecycle grouping is required, define a custom identifier on source lines/subscriptions and deterministic reconstruction rules.
5	Test pricing variants	CPQ QA	Cover non-zero prices by ramp year, renewal pricing methods, uplift, and renewal before each segment start.
6	Coordinate linked stories	Product owner	Align the chosen behavior with SALDEV-1439 and SALDEV-1493; do not treat this investigation as implementation approval.

Ready-to-paste architect response

STORY COMMENT

Architect review completed for SALDEV-1475 in FlywirePartial using Opportunity OOB-CPQ-Learning-Shrey-20260821, original Quote Q-37942, Contract 00021743, Amendment Quote Q-37946, and Renewal Quote Q-37950. Salesforce CPQ did not copy or recreate Quote Line Groups: five Subscriptions trace indirectly through their Source Quote Lines, while both lifecycle quotes have Group Line Items=false, zero groups, and null line Group IDs. The final-group assumption is rejected because Q-37950 contains three separate Domestic Payments lines, each linked to a different Subscription. The Platform Fee line links to SUB-0067611 and carries Renewal Price / NS Billing Price 10,000; the one-time Implementation Fee does not renew. The renewal header correctly spans 24-Sep-2029 through 23-Sep-2030 even though renewal was generated before the final segment started. Changes Requested: complete the required non-ramped lifecycle test and a populated NS_ID__c test before closing the investigation. If group identity must survive, use a persistent custom identifier and deterministic reconstruction automation coordinated with SALDEV-1439 and SALDEV-1493.

Evidence boundary

This assessment combines the SALDEV-1475 ticket text, Salesforce Help KA 004518583, read-only FlywirePartial schema and record queries, and local source review. No records, deployments, activations, pricing calculations, quick deploys, or org metadata changes were performed.
