

SALDEV 1403 Artifacts and Deployment List

Story: Update output documents for stepped-up pricing (OmniStudio) | Reference environment: FlywirePartial | 7 September 2026

Required change set: two Data Mappers and one proposal DOCX. No Apex class or Apex test is required. These changes are already present in Partial; this list describes the scope to promote to another approved environment, not a request to repeat the Partial deployment.

Type and action	Component name	Source API name or record ID	Dependency	Change and deployment scope
Extract Data Mapper INCLUDE	GetQuoteProposalDataSteppedUpPricing	0jlhG0000000GsnUAE Type: Extract	Quote, Quote Line Group and Quote Line data	Four added items: group start-date/term/sequence sorting; grouped line sorting; ungrouped line sorting; group subscription-term mapping. Preserve the other Extract items.
Transform Data Mapper INCLUDE	CPQQuoteProposalDocumentSteppedUpPricing	0jlhG0000000HX7UAM Type: Transform	Extract output and existing document token model	Two Description formula updates: append Rate Details with null-safe spacing and preserve Cancellation, Quantity Increase and Quantity Reduction suffixes.
Template content INCLUDE	CPQ Quote Proposal Updated proposal DOCX	ContentVersion: 068hG000003PryiQAC ContentDocument: 069hG000003DZfnQAG	Existing CPQ Quote Proposal template and content link	Both grouped branches use sequential Term n: XX Months headings. Remove both service-period paragraphs. Preserve tables, signature content and Ship-To conditions.
Document Template DEPENDENCY ONLY	CPQ Quote Proposal	2dtPb0000000BwLIAU MicrosoftWord / ClientSide Link: 2ddhG0000001bwnQAA	Transform output and proposal content	Existing template configuration is unchanged. Verify the target template and its content link resolve to the updated DOCX. Do not add an unrelated template-record change.
OmniScript DEPENDENCY ONLY	Generate Quote Document - SteppedUpPricing Existing version 2	0jNhG0000000umzUAA CPQ / QuoteDocument / English	Both Data Mappers and template-selection action	Existing entry point is unchanged. Verify it exists and is active in the target. No new OmniScript version or activation change belongs to this fix.

Recommended order: 1) Extract Data Mapper 2) Transform Data Mapper 3) Proposal DOCX and existing content association 4) Verify dependencies 5) Run the scoped validation and business tests.

All record IDs shown are Partial reference IDs. Resolve records and relationships in the target org; do not reuse source IDs as target IDs.

Exact changes and deployment handling

Changed item	Partial item ID	Required behavior
Extract group order	OkdhG0000003FiTQAU	ORDER BY SBQQ__StartDate__c ASC NULLS LAST, SBQQ__SubscriptionTerm__c DESC NULLS LAST, SBQQ__Number__c ASC
Extract grouped line order	OkdhG0000003FiUQAU	ORDER BY SBQQ__Number__c ASC on grouped Quote Lines.
Extract ungrouped line order	OkdhG0000003FiVQAU	ORDER BY SBQQ__Number__c ASC on ungrouped Quote Lines.
Extract group term mapping	OkdhG0000003FiWQAU	SBQuote:QuoteLineGroup:SBQQ__SubscriptionTerm__c → QuoteLineGroup:SubscriptionTerm
Transform grouped Description	OkdhG0000002nUTQAY	Update FormulaExpression. Preserve result path QuoteLineGroup:QuoteLine:LineDescriptionWithType.
Transform ungrouped Description	OkdhG0000002m5NQAQ	Update FormulaExpression. Preserve existing result path UngroupedLine:LineDescriptionWithType.

How to package the changes

1. Use the two named Data Mappers and the updated DOCX as the artifact allowlist. The item-level delta is four additions and two formula updates; a whole-mapper export must preserve all unrelated items.
2. The Partial run used scoped configuration-record changes and a new ContentVersion, not a successful Metadata API package. The recorded Metadata API retrieval did not expose these mapper/template records. Confirm the supported OmniStudio transfer mechanism in the destination before preparing an import-ready package.
3. Resolve the target CPQ Quote Proposal template and ContentDocument, then associate the updated DOCX with that existing template. The source file is CPQ Quote Proposal - SALDEV-1403 - dry-run.docx; the verified Partial ContentVersion is listed on page 1.
4. Refresh only the two affected Data Mapper caches if required by the target workflow. Verify the existing OmniScript remains available and invokes the expected mappers/template. This does not require a new OmniScript version.
5. After transfer, independently compare the six item changes and proposal bytes, then run the native Extract/Transform checks and fresh document tests.

Do not include

No Apex class, Apex test, LWC, Flow, custom field, permission set or Visualforce change is required for this fix. Exclude the historical CPQQuoteProposalOutputSerializer and its test utilities. SALDEV-1420 approval-email components are separate and must not be added to this package. Local scripts, validation JSON and render folders are supporting evidence, not deployable Salesforce components.

Validation and business test steps

Latest recorded Partial dry run: 236 of 236 backend checks passed across eight native Extract/Transform executions and 153 eligible product rows. Configuration and proposal bytes matched the verified changes. Generated-document appearance and sequential Term numbering still require business acceptance.

Main reproduction case

1. Open Q-37912 in FlywirePartial: https://flywire--partial.sandbox.lightning.force.com/lightning/r/SBQQ__Quote__c/a2NhG000003IAjmUAE/view. Capture the current group dates, terms and product order in Edit Lines.
2. Choose Generate Document or Generate Quote Document using the existing stepped-up-pricing action. Select CPQ Quote Proposal when prompted and open a fresh Preview or generated document.
3. Expect Group4, Group1, Group2, Group3, headed Term 1: 36 Months and Terms 2, 3 and 4: 12 Months. Confirm no service dates in group headings and that numbering restarts at 1 for a second document.
4. Compare all 78 eligible rows with QLE: correct group, product order, bundle-child placement and no duplicate/missing lines. Ship-To Account should be hidden for this quote. Capture output evidence.

Quote	Regression purpose	Expected result
Q-37640	Grouped; Ship-To No	Three 12-month groups; 12 rows; Ship-To hidden. This is no longer an ungrouped case.
Q-38009 / Q-38023	Ungrouped new quotes	9 / 2 rows; Ship-To visible / hidden respectively; no Term or Group header.
Q-38021	Ungrouped renewal	20 rows in QLE order; Ship-To hidden; Rate Details inside Description.
Q-37723 / Q-37780	Grouped structure and Ship-To	14 / 18 rows; Ship-To visible / hidden. Missing group terms limit these to structure checks.
Q-38029	Amendment exclusion	Two Amendment source lines excluded; zero eligible rows. Positive amendment output requires another suitable record.

Acceptance and evidence

Verify Rate Details in Description, readable spacing, blank-value handling, preserved line-type suffixes and final table/page layout. Use records with populated group terms for full heading acceptance. Save quote ID, test date, generated filename, source QLE screenshot, output screenshot, expected/actual result and Pass/Fail/Blocked. Obtain business acceptance after these checks; backend success alone does not close the story.

Prepared as an updated artifact list using the supplied reference layout. No deployment was performed while preparing this document.
