

SALDEV 1403 Component Changes and Test Guide

CPQ Quote Proposal and OmniStudio

Environment: FlywirePartial | Evidence date: 7 September 2026

This document brings together the SALDEV-1403 component changes, expected quote-document behavior, dry-run results, test records, and steps to reproduce. It is intended for the story reviewer and business tester.

The latest read-only backend dry run passed 236 of 236 checks across eight quotes. The remaining acceptance work is to inspect fresh generated documents, especially sequential Term numbering, final table layout, and the cases with incomplete test data.

What the story delivers

- Groups appear in start-date order, with the longest subscription term first only when start dates match. Remaining ties follow the Quote Line Editor sequence.
- Grouped headings show Term 1, Term 2, and so on with each group's subscription term in Months. Service-period text is removed from both grouped branches.
- Products retain quote-line order within their group or ungrouped table. Bundle options stay beneath the correct parent in the tested data.
- Rate Details are appended to Description with appropriate spacing and blank-value handling. Applicable Cancellation, Quantity Increase, and Quantity Reduction labels remain.
- Ungrouped output retains its original table layout, with Ship-To visibility controlled by Multiple Ship-To Accounts.

Dry run outcome

Check	Recorded result
Sandbox identity	FlywirePartial, org 00DhG0000000jOXUAY
Native Extract and Transform runs	8 completed without mapper errors
Backend assertions	236 passed out of 236
Eligible product rows checked	153 across the eight quotes
Scoped configuration and template	Match the previously verified state
Fresh generated document appearance	Pending business verification

SALDEV-1420 material is reference only. This guide covers the SALDEV-1403 quote proposal; it does not assign approval-email testing to this story.

Changed components and exact items

Extract Data Mapper

Name: GetQuoteProposalDataSteppedUpPricing

Record ID: 0jlhG0000000GsnUAE

Added item	Record ID	Behavior
Group order	0kdhG00000003FiTQAU	Start Date ASC NULLS LAST; Subscription Term DESC NULLS LAST; group Number ASC.
Grouped line order	0kdhG00000003FiUQAU	Quote-line Number ASC for lines inside groups.
Ungrouped line order	0kdhG00000003FiVQAU	Quote-line Number ASC for ungrouped lines.
Group term mapping	0kdhG00000003FiWQAU	Map group SBQQ__SubscriptionTerm__c to QuoteLineGroup:SubscriptionTerm.

Transform Data Mapper

Name: CPQQuoteProposalDocumentSteppedUpPricing

Record ID: 0jlhG0000000HX7UAM

Updated item	Record ID	Formula result
Grouped Description	0kdhG00000002nUTQAY	QuoteLineGroup:QuoteLine:LineDescriptionWithType
Ungrouped Description	0kdhG00000002m5NQAQ	UngroupedLine:LineDescriptionWithType

Both formulas concatenate nonblank Description and Rate Details, inserting a space only when needed. They retain the relevant line-type suffix. Example: “Service description Rate text (Quantity Increase)”. The existing result-path spelling is preserved.

Proposal document template

Component: CPQ Quote Proposal

Template ID: 2dtPb0000000BwLIAU

Content document ID: 069hG0000003DZfnQAG

Verified content version: 068hG0000003PryiQAC

Both grouped branches use a Word-numbered Term heading with {{SubscriptionTerm}} Months. Both Service Period paragraphs are removed. Product tables, signature content, grouped/ungrouped conditions, and Ship-To conditions are retained.

Change scope: four new Extract items, two Transform formula updates, and one proposal DOCX. No Apex class, custom field, or OmniScript component change is part of this SALDEV-1403 fix.

Steps to reproduce on the main quote

Start with Q-37912, the reported ordering case. Confirm the browser is connected to flywire--partial.sandbox before testing. Current inputs should be rechecked because other testers can edit shared records.

Open Q-37912 in FlywirePartial

1. Open the quote and Edit Lines. Capture the group dates, subscription terms, group sequence, product sequence, and Multiple Ship-To Accounts value. Do not change the quote merely to match an expected screenshot.
2. Return to the quote. Open the action menu and choose Generate Document or Generate Quote Document using the existing stepped-up-pricing action.
3. If template selection appears, choose CPQ Quote Proposal. Complete the existing generation screen and select Preview or Generate according to the established test workflow.
4. Open the fresh output. Do not use a previously attached PDF as evidence of this execution.
5. Compare the group headings against the expected sequence below. Verify that service dates are absent from the group headings.

Heading	Source group	Expected term
Term 1	Group4	36 Months
Term 2	Group1	12 Months
Term 3	Group2	12 Months
Term 4	Group3	12 Months

6. Check all 78 eligible product rows against the source quote. Products must remain in the correct group, follow quote-line order, and appear once. Keep bundle children and nested options with their parent.
7. Confirm Ship-To Account is hidden for Q-37912 because Multiple Ship-To Accounts is No.
8. Generate another fresh preview and confirm Term numbering restarts at 1, with no skipped or repeated numbers. Check page breaks, table widths, and readable descriptions.
9. Record the quote ID, output filename/time, expected versus actual result, screenshot, and Pass/Fail/Blocked status.

Expected backend group sequence was confirmed in the latest run. Whether Word numbering survives native document repetition is still a visual acceptance check.

Regression records and expected output

Close and reopen the generation screen for every quote so the correct record context is used. Repeat the page 3 preview procedure and compare each fresh document with the saved quote inputs.

Quote	Case	Expected output
Q-37640	Grouped; Ship-To No	3 groups with 12-month terms; 12 rows; Ship-To hidden.
Q-38009	Ungrouped new; Ship-To Yes	9 rows; Ship-To visible; no Term/Group heading; 2 populated Rate Details lines.
Q-38023	Ungrouped new; Ship-To No	2 rows; Ship-To hidden; no Term/Group heading.
Q-38021	Ungrouped renewal	20 rows; Ship-To hidden; no group heading; 2 populated Rate Details lines.
Q-37723	Grouped renewal; Ship-To Yes	5 groups; 14 rows; Ship-To visible. Group terms missing; structure checks only.
Q-37780	Grouped; Ship-To No	5 groups; 18 rows; Ship-To hidden; 4 populated Rate Details lines. Terms missing; structure checks only.
Q-38029	Amendment exclusion	2 source Amendment lines excluded; 0 eligible output rows. Exclusion check only.

Description and Rate Details checks

1. Use Q-38009, Q-37780, and Q-38021 for populated Rate Details. Match the output text to the source External Description and Rate Details.
2. Confirm Rate Details appear in Description, not a separate column. Check readable spacing and no literal NULL or blank-value placeholders.
3. Check description-only, rates-only, and both-blank cases using suitable existing test data. Blank values must not add dangling separators.
4. For an eligible line with Cancellation, Quantity Increase, or Quantity Reduction, verify the appropriate suffix remains. Use a suitable positive amendment record; Q-38029 cannot demonstrate positive output.

Backend status: all eight quotes passed the captured checks, including the main Q-37912 case. Visual status: Pending until fresh generated output is reviewed. Q-37640 is grouped and must not be used as the ungrouped test case.

Proposal template reference screenshot

The excerpts below show the actual local proposal template used for the verified content comparison. Merge tokens and conditional branches are visible because this is a template view, not a Salesforce-generated customer document.

Product	Ship To Account	Qty.	Billing Frequency	Description	Price
{{#Line}}{{Product Name}}	{{ShipToAccount}}	{{Quantity}}	{{BillingFrequency}}	{{LineDescriptionWithType}}	{{Price}}{/Line}}
{{/IF_MultipleShipToAccounts}}{{#IF_NoMultipleShipToAccounts}}					
Product	Qty.	Billing Frequency	Description	Price	
{{#Line}}{{Product Name}}	{{Quantity}}	{{BillingFrequency}}	{{LineDescriptionWithType}}	{{Price}}{/Line}}	

Figure 1. Ungrouped template branches with and without the Ship-To Account column. Only the applicable branch should appear in a generated document.

Term 1: {{SubscriptionTerm}} Months

Product	Ship To Account	Qty.	Billing Frequency	Description	Price
{{#QuoteLine}}{{Product Name}}	{{ShipToAccountName}}	{{Quantity}}	{{BillingFrequency}}	{{LineDescriptionWithType}}	{{Price}}{/QuoteLine}}

Figure 2. Grouped template heading and product table. The template uses the group subscription-term token and a numbered Term heading.

Capture fresh output evidence

For Q-37912, capture each Term heading and enough product rows to establish group and bundle order. Record the generated filename and time. For ungrouped quotes, capture the product table and the absence of a group heading. Include source QLE screenshots so the expected sequence can be reproduced.

These reference images do not prove repeated Term numbering, conditional section removal, or final pagination. Those checks must use fresh output from the normal quote-document action.

Technical source files

The local change record is mapper-change-spec.json. The proposal source file is CPQ Quote Proposal - SALDEV-1403 - dry-run.docx. They describe the six mapper-item changes and the template changes listed on page 2. The recorded native output and source-line captures support the backend results on page 1.

Acceptance checklist and result record

What remains before acceptance

- Confirm sequential Term numbering begins at 1, repeats correctly for each group, and restarts for each generated document.
- Confirm service dates are absent from headings and the final document has readable tables, descriptions, and page breaks.
- Complete grouped and ungrouped Ship-To Yes/No checks with fresh document screenshots.
- Verify positive amendment output with eligible lines. The existing Q-38029 case only proves exclusion.
- Use grouped records with populated group subscription terms for full heading acceptance. Ten groups across Q-37723 and Q-37780 lack terms; blank Months headings cannot be marked passed.
- Review output as an intended business user and obtain business-owner acceptance.

Record each business test

Field	Entry
Quote number and record ID	_____
Scenario and tester	_____
Test date and output filename	_____
Source screenshot reference	_____
Output screenshot reference	_____
Expected result	_____
Actual result and issue reference	_____
Result	Pending / Pass / Fail / Blocked

Evidence boundaries

The 236 backend checks validate captured source order, product counts, description text, conditions, and scoped configuration. Product-name multiplicities do not independently establish quote-line identity because the output does not include quote-line record IDs. Backend success does not replace review of the generated document.

Business reviewer: _____ Review date: _____

Final acceptance: _____ Open issues: _____
