

SALDEV 1420

Story Test Execution

Approval email testing in Partial

Use this document to reproduce the email-table scenarios and record the business test results. Confirm group order, product order, descriptions and approval-template behavior against the saved quote.

Test information	Details
Environment	Flywire Partial sandbox
Test user	Record the CPQ Sales user and approver used for each case
Review date	7 September 2026
Execution status	Business retest to be completed
Evidence	Earlier screenshots are references. Attach a fresh output screenshot for each executed case.

Before testing

1. Confirm the browser address contains flywire--partial.sandbox.
2. Use a dedicated test quote or an agreed test copy. Open Edit Lines, save and calculate, then check the persisted dates, terms and line order.
3. Use the appropriate existing approval record for a template preview. If an email must be sent, use the agreed sandbox test recipient and normal approval process.
4. Record the quote link, approval record, tester, expected result and actual result. Do not mark a case passed from an earlier screenshot.

Expected ordering

Groups appear by start date, earliest first. When start dates match, the longer subscription term appears first. Equal-date and equal-term groups retain QLE group sequence. Products retain QLE sequence, with bundle options beneath their parent.

Earlier screenshots may show Group names, date banners or an older row order. The expected results in each test case define the behavior to verify now.

01 Quote approval email

Template: Request - Quote Approval Request - AQS

Steps to reproduce

1. Use a quote with grouped lines, a bundle and standalone products. Put at least two products in nonalphabetical QLE order.
2. Save and calculate. Use its Quote Approval record and select the Request - Quote Approval Request - AQS template.
3. Open the available preview. If using the normal submission workflow, inspect the email received by the agreed test approver.
4. Compare the group headers, product sequence, prices and quantities with the saved quote.

The screenshot shows the Salesforce Classic Email Templates setup page. The left sidebar contains navigation links for Setup, Home, Object Manager, and various email-related settings. The main content area displays the 'Classic Email Templates' setup page. At the top, there is a 'Next Step' section with links to 'Approve' and 'Reject'. Below this is a table of 'Approvals' with columns for Approval #, Approval Step, Approval Chain, Rule, Approver, and Status. The table shows three approval records for quote A-13303, A-13304, and A-13305. Below the approvals table is a section for 'Quote Line Items' with a table showing product details. The table has columns for Product Name, Applied Discount, Price, Quantity, Billing Frequency, Subscription Type, Description, Quote Line Type, and Ship to Account. The table lists four products: Back-end FX, Domestic Payments, Domestic Payments SaaS Fee, and eStore.

Approval #	Approval Step	Approval Chain	Rule	Approver	Status
A-13303	1		Adjusted Amount >= 0	Pricing Team Approver	Approved
A-13304	1		Exception Pricing Present	Pricing Team Approver	Approved
A-13305	2	HC Quote Approval Chain	HC Vertical Approval	Jesse Smith	Approved

Product Name	Applied Discount	Price	Quantity	Billing Frequency	Subscription Type	Description	Quote Line Type	Ship to Account
Back-end FX		2.00%	1.00	Monthly	Renewable	Product for clients that bill in currency different than settlement currency	New	FW VR Healthcare Account
Domestic Payments		USD 0.00	1.00	Monthly	Renewable	Domestic Payments Platform	New	FW VR Healthcare Account
Domestic Payments SaaS Fee		USD 10000.00	1.00	Monthly	Renewable	SaaS fee for Payments Platform	New	FW VR Healthcare Account
eStore		USD 195.00	1.00	Monthly	Renewable	Monthly SaaS: eStore Platform : 1 - 7 Stores: \$195 each; 8 - 25 Stores: \$1,495; >25 Stores: \$2,495	New	FW VR Healthcare Account

Earlier test screenshot — Request - Quote Approval Request - AQS. Capture a fresh result after repeating these steps.

Expected result

Confirm Billing Frequency appears before Subscription Type. Quote Line Type is shown. Ship-To appears only when Multiple Ship-to Accounts is Yes. Group and bundle order must follow the expected ordering rule.

Open item: the earlier test record includes Rate Details in Quote Approval Description. Confirm the agreed requirement before accepting Description-only output.

Result: Not run / Pass / Fail / Blocked Tester: _____ Date: _____

02 Legal approval email

Template: Legal - Approval Request

Steps to reproduce

1. Open the Opportunity linked to the test quote and confirm the intended quote is its Primary Quote.
2. Include one product with both Description and Rate Details populated, and another with Rate Details blank.
3. Use the Opportunity Legal Approval record and the Legal - Approval Request template to preview the output, or follow the agreed sandbox Legal approval process.
4. Compare every displayed product with the quote and inspect the Description text.

The screenshot shows the Salesforce Classic Email Templates setup page. The left sidebar contains navigation links for Setup, Home, and Object Manager. The main content area is titled 'Classic Email Templates' and displays three tables: 'Amendment Lines with One Price Change', 'Cloned Lines (New)', and 'New Lines'. Each table has columns for Product Name, Price, Quantity, Billing Frequency, Description, and Ship to Account.

Product Name	Price	Quantity	Billing Frequency	Description	Ship to Account
Domestic Payments	USD 100.00	1.00	Monthly	Flywire Payments Platform.	FW KF HC Test Account
Domestic Payments	USD 0.00	0.00	Monthly	Flywire Payments Platform.	FW KF HC Test Account

Product Name	Price	Quantity	Billing Frequency	Description	Ship to Account
Domestic Payments	USD 0.00	1.00	Monthly	Flywire Payments Platform.	FW VR Healthcare Account

Product Name	Price	Quantity	Billing Frequency	Description	Ship to Account
ACHIEFT Admin Returns	USD 5.00	1.00	Monthly	ACHIEFT Admin Returns.	FW VR Healthcare Account
Cross Border Payments	USD 0.00	1.00	Monthly	Platform for cross border receivables payments.	FW VR Healthcare Account
eStore	USD 195.00	1.00	Monthly	Shopping cart experience features one integrated marketplace (Client mail) with multiple online store to facilitate events, collect fees or facilitate the sale of items. 1 - 7 Stores: \$195 each; 8 - 25 Stores: \$1,495; >25 Stores: \$2,495	Endeavor Health

Earlier test screenshot — Legal - Approval Request. Capture a fresh result after repeating these steps.

Expected result

Confirm Product Name, Price, Quantity, Billing Frequency and Description. Rate Details is part of Description, not a separate column. Blank Rate Details must not leave NULL text or a dangling separator.

Result: Not run / Pass / Fail / Blocked Tester: _____ Date: _____

03 Credit Risk approval email

Template: Credit Risk - Approval Request

Steps to reproduce

1. Open the test Opportunity and verify its Primary Quote and saved quote lines.
2. Use the applicable Credit Risk Approval record and Credit Risk - Approval Request template.
3. Preview the email or inspect the approved sandbox test email. Use the Credit Risk workflow so the correct approval record is supplied.
4. Compare the output with the saved QLE and repeat the group-order and Description checks.

The screenshot shows the Salesforce Classic Email Templates setup page. The left sidebar contains a navigation menu with 'Email' selected, showing 'Classic Email Templates' and 'Classic Letterheads'. The main content area is titled 'Classic Email Templates' and displays a table of templates for 'For Year 2' and 'For Year 3'. The table has columns for Product Name, Price, Quantity, Billing Frequency, and Description. The 'For Year 2' section shows five templates: Domestic Payments, Partnership Incentive, Revenue Share - FX Money Moved (MM tiered, tiered rate), Direct to Invoice, and Recurring Payments. The 'For Year 3' section shows one template: Domestic Payments.

For Year 2				
Product Name	Price	Quantity	Billing Frequency	Description
Domestic Payments	3.75%	1.00	Monthly	Flywire Payments Platform. Payment Method: Amex. Transaction Type: Same Currency. CC Issued Country: All. Non-Local Currency: No. Surcharging: No. Transaction Currency: EUR
Partnership Incentive	USD 7500.00	1.00	Monthly	Partnership agreement product.
Revenue Share - FX Money Moved (MM tiered, tiered rate)	USD 0.00	1.00	Annual	Revenue share based on total FX money moved through Flywire's platform.
Direct to Invoice	USD 5.00	1.00	Monthly	for enabling of payments directly from customer invoice.
Recurring Payments	0.25%	1.00	Monthly	Recurring card payments.

For Year 3				
Product Name	Price	Quantity	Billing Frequency	Description
Domestic Payments	4.00%	1.00	Monthly	Flywire Payments Platform. Payment Method: Amex. Transaction Type: Same Currency. CC Issued Country: All. Non-Local Currency: No.

Earlier test screenshot — Credit Risk - Approval Request. Capture a fresh result after repeating these steps.

Expected result

Credit Risk uses the same table format as Legal. Confirm group order, product order, merged Description and Rate Details, and the conditional Ship-To column.

Result: Not run / Pass / Fail / Blocked Tester: _____ Date: _____

04 Revenue approval email

Template: Revenue - Approval Request

Steps to reproduce

1. Use an agreed sandbox quote that meets the normal Revenue approval criteria. Record any discount or other input used to trigger that approval.
2. Save and calculate, then use the applicable Revenue Approval record and Revenue - Approval Request template.
3. Preview the output or inspect the approved sandbox test email.
4. Compare applied discounts, prices, quantities, groups and product order against the saved quote.

Earlier test screenshot — Revenue - Approval Request. Capture a fresh result after repeating these steps.

Expected result

Confirm Product Name, Applied Discount, Price, Quantity, Billing Frequency and Description. Description and Rate Details should be combined. Group and product ordering must match the expected rule.

Result: Not run / Pass / Fail / Blocked Tester: _____ Date: _____

05 Mixed term group order

Run this case across Quote Approval, Legal, Credit Risk and Revenue.

Test data

Use a 72-month test quote beginning 1 October 2026. Give each group a distinct description marker so it is easy to identify in the output.

QLE group	Ramping	Start date	Term	Output position
G1	Yes	1 Oct 2026	24 months	2
G2	Yes	1 Oct 2028	12 months	3
G3	Yes	1 Oct 2029	36 months	4
G4	No	1 Oct 2026	72 months	1

Steps to reproduce

1. Create or use the agreed test quote and enter the four groups above in Edit Lines.
2. Add products to each group, including a bundle and standalone products. Save and calculate.
3. Reopen the quote and verify saved group dates, subscription terms and QLE sequence.
4. Preview each of the four approval templates using its appropriate approval record.
5. Match group markers and product rows to the source quote. Save the QLE and output screenshots together.

Expected result

G4 → G1 → G2 → G3

Term 1: 72 months

Term 2: 24 months

Term 3: 12 months

Term 4: 36 months

The later 36-month group must remain after the earlier 12-month group. Sorting all groups by term length is not acceptable.

Result: Not run / Pass / Fail / Blocked Tester: _____ Date: _____

06 Grouping regression cases

For each row, save the quote, verify its inputs and repeat all four template previews. Record one result per template.

Case	Steps to reproduce	Expected result
All ramped	Create three successive ramped groups with terms 12, 6 and 18 months.	Groups follow their start dates: 12, 6, 18.
All non-ramped	Create three equal-date, equal-term groups. Put a Z-named group before an A-named group in QLE.	QLE group order is retained; names do not reorder the groups.
One non-ramped and two ramped	Use a full-term group and two successive ramped groups. Give the full-term group the first start date.	Full-term group first, then ramped groups by start date.
Two non-ramped and two ramped	Use two full-term groups starting with the quote and two successive ramped groups.	Full-term groups in QLE tie order, then ramped groups chronologically.
No groups	Use an ungrouped quote with nonalphabetical product order.	One flat table with no Term or Group header; QLE row order retained.
Later non-ramped	Where CPQ permits it, start a non-ramped group after an earlier ramped group.	Earlier start first, regardless of the ramping flag.

Quote Line Items:

Product Name	Price	Quantity	Billing Frequency	Description
529 Disbursements	USD 5.00	1.00	Monthly	529 disbursement solution for providers.
Professional Services	USD 250.00	1.00	Monthly	Hourly rate for out-of-scope work requested by Client.

Next Step: To reject this request, click on this link: [Reject](#)

Earlier ungrouped Legal email reference. No Term or Group header is shown.

If a CPQ rule prevents a test setup, record Blocked and the rule message. Do not disable unrelated rules to force the scenario.

Result: Not run / Pass / Fail / Blocked Tester: _____ Date: _____

07 Product and bundle sequence

Steps to reproduce

1. Open the retained SALDEV-1420 Test Opp quote, or use an agreed copy. Verify its current contents before testing.
2. In Edit Lines, place Domestic Payments before Cross Border Payments. For eStore, place Usage before Implementation Fee.
3. Save and calculate. Preview each approval template.
4. Repeat with a supported nested bundle and a standalone product. Confirm sibling order and parent-child placement.

Group	Expected sequence for the retained example
Term 1: 72 months	eStore → eStore (Usage) → eStore - Implementation Fee
Term 2: 72 months	Domestic Payments → Cross Border Payments

What to check

- Each expected line appears once in the correct group.
- Parent products appear before their options. Nested options remain beneath their direct parent.
- Sibling and standalone products follow QLE sequence rather than alphabetical order.
- Prices, quantities and descriptions match the saved quote.

Retained example quote: a2NhG000003xBvNUAU. Use this as a reference only if its contents still match the example.

Result: Not run / Pass / Fail / Blocked Tester: _____ Date: _____

08 Description and Rate Details

Use Legal and Credit Risk for the Legal description checks. Repeat the combined-text check for Revenue.

Steps to reproduce

1. Create four test lines: both fields populated; Description only; Rate Details only; and both fields blank.
2. Save and calculate. Preview the appropriate approval email.
3. Read the complete Description cell and compare it with the source values.
4. Have the Legal reviewer confirm the text is suitable to copy into the contract document.

Input	Expected result
Description and Rate Details	Both values appear once in one Description cell with readable separation.
Description only	Description appears without a trailing separator or missing-value marker.
Rate Details only	Rate Details appears without a leading separator.
Both blank	Cell is blank; no NULL or placeholder text.

Quote Approval confirmation

The previous test record shows Description combined with Rate Details. Confirm with the story owner whether this is required for Quote Approval. Record the decision and compare the output with that agreed expectation. Leave this item open until the difference is resolved.

Result: Not run / Pass / Fail / Blocked Tester: _____ Date: _____

09 Amendment email

Steps to reproduce

1. Use the normal CPQ amendment process on an approved sandbox test contract.
2. Include unchanged lines and supported changed, new or cancelled lines. Save and calculate.
3. Inspect the calculated Quote Line Type values; do not manually enter them.
4. Preview all four approval templates. Reconcile the included lines with the quote and intended Opportunity Products.

Amendment Lines with One Price Change Ramped Up: Yes | Start Date: | End Date:

Product Name	Applied Discount	Price	Quantity	Billing Frequency	Subscription Type	Description	Quote Line Type	Ship to Account
Domestic Payments		USD 100.00	1.00	Monthly	Renewable	Domestic Payments Platform	New	FW KF HC Test Account
Domestic Payments		USD 0.00	0.00	Monthly	Renewable	Domestic Payments Platform	Cancellation	FW KF HC Test Account

Cloned Lines (New) Ramped Up: Yes | Start Date: | End Date:

Product Name	Applied Discount	Price	Quantity	Billing Frequency	Subscription Type	Description	Quote Line Type	Ship to Account
Domestic Payments		USD 0.00	1.00	Monthly	Renewable	Domestic Payments Platform	New	FW VR Healthcare Account

New Lines Ramped Up: No | Start Date: | End Date:

Product Name	Applied Discount	Price	Quantity	Billing Frequency	Subscription Type	Description	Quote Line Type	Ship to Account
ACHIEFT Admin Returns		USD 5.00	1.00	Monthly	Renewable	ACHIEFT Admin Returns	New	FW VR Healthcare Account
Cross Border Payments		USD 0.00	1.00	Monthly	Renewable	International Payments - includes FX and same-currency cross border payments	New	FW VR Healthcare Account
eStore		USD 195.00	1.00	Monthly	Renewable	Monthly SaaS: eStore Platform	New	Endeavor Health
eStore - Implementation Fee		USD 1000.00	1.00	Monthly	One-time	Implementation Fee: eStore Platform	New	Endeavor Health

Earlier amendment Quote Approval screenshot. Use calculated line types and current quote data for the new result.

Expected result

Lines with Quote Line Type = Amendment are excluded. Eligible changed lines remain, with correct groups, bundle placement, prices and quantities. No expected line is lost or duplicated.

Result: Not run / Pass / Fail / Blocked Tester: _____ Date: _____

10 Renewal Ship To and user access

Renewal steps

1. Create a renewal through the normal CPQ process using a suitable sandbox test contract.
2. Save and calculate. Record the expected renewal products, groups, prices and quantities.
3. Preview all four approval outputs and compare them with the saved quote.

Expected: eligible renewal lines appear and follow the required group and product order. If suitable contract data is unavailable, record the test as Blocked.

Ship To steps

1. Use a valid quote setup with Multiple Ship-to Accounts = Yes and populated Ship-To information. Preview the outputs.
2. Repeat with the flag set to No through the normal supported workflow.
3. Repeat with an ungrouped quote if that setup is supported.

Expected: Ship-To visibility follows the Yes/No flag. No groups alone does not determine whether the column is hidden. Automatic population of the flag is handled separately.

Business user access steps

1. Run a preview as a representative CPQ Sales user with the intended permission set.
2. Repeat with the relevant approver where the workflow uses another user.
3. Confirm the table is populated and no access error appears. Record the users tested.

Result: Not run / Pass / Fail / Blocked Tester: _____ Date: _____

11 Test results and acceptance

Complete this record after executing the cases. Add fresh screenshots beside each case or in an appendix, labelled with the case number, template and quote.

Case	Quote Approval	Legal	Credit Risk	Revenue
01–04 Template checks	Not run	Not run	Not run	Not run
05 Mixed terms	Not run	Not run	Not run	Not run
06 Grouping cases	Not run	Not run	Not run	Not run
07 Bundle and line order	Not run	Not run	Not run	Not run
08 Description and rates	Open item	Not run	Not run	Not run
09 Amendment	Not run	Not run	Not run	Not run
10 Renewal	Not run	Not run	Not run	Not run
10 Ship-To and access	Not run	Not run	Not run	Not run

Record for each executed case

Tester: _____ Date: _____

Quote link: _____

Approval record or email subject: _____

Expected result: _____

Actual result: _____

Screenshot reference: _____

Result and defect reference: _____

Acceptance

Confirm all required cases have an explicit Pass, Fail or Blocked result. Resolve the Quote Approval Description decision and any failures before closure. Obtain Legal acceptance of the current email text and formatting.

Business reviewer: _____ Date: _____

Legal reviewer: _____ Date: _____
