

ARCHITECT REVIEW

SCC-3655 | Internal Case Comments

Great Plains Sandboxes | Read-only configuration and UAT readiness assessment

Environments	GreatPlainsMerge 00DEa00000GkAsHMAV GreatPlainsUAT 00DEa00000FZILBMA1
Review date	26 August 2026
Retrieval	Succeeded Merge 09SEa00000id0hxMAA UAT 09SEa00000icYhBMAU
Decision	Conditional approval - configuration complete; runtime evidence pending
Boundary	No records, deployment, activation, or org metadata were changed

ARCHITECT DECISION

Do not deploy redundant SCC-3655 metadata. The standard Case Comments configuration is present. Approve runtime behavior only after a named UAT rep completes the two-comment evidence run; Trouble Ticket-specific testing also depends on its separate UAT record type and layout promotion.

Acceptance outcome

#	Scope	Result	Evidence
1	Internal designation	Config pass	IsPublished is createable and updateable; leave Public/Published unchecked for internal-only comments.
2	Date and time	Config pass	CreatedDate is a non-editable system datetime field on CaseComment.
3	Posting user	Config pass	CreatedById is a non-editable system reference that records the posting user.
4	Lifecycle chronology	Runtime pending	The related list is configured, but both sandboxes currently contain zero CaseComment records.
5	Rep can post and read	Partial pass	UAT has the related list and 46 active CRC Team users; a named-user UI test was not executed.

Solution and visibility path

SCC-3655 uses only the standard Case Comments related list and CaseComment fields. The configuration path is complete; the remaining gate is persona-level runtime evidence in UAT.

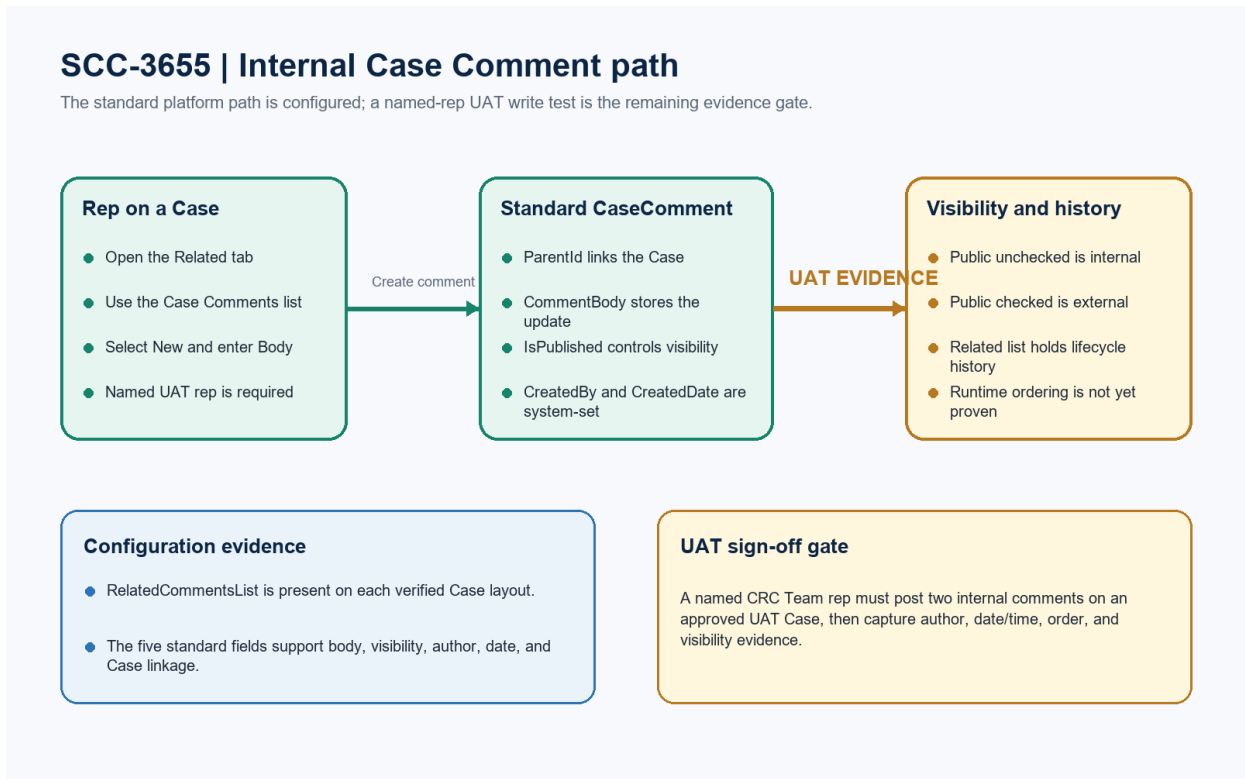

Figure 1. SCC-3655 internal Case Comment path

DESIGN READING

Green is verified platform configuration. Amber is the remaining UAT evidence gate.

Detailed configuration findings

1. Case layout presence

Org	Layout	Result	Evidence
GreatPlainsMerge	Case-Case Layout	Present	RelatedCommentsList is present.
GreatPlainsMerge	Case-Trouble Ticket	Present	RelatedCommentsList is present.
GreatPlainsUAT	Case-Case Layout	Present	RelatedCommentsList is present.
GreatPlainsUAT	Case-Trouble Ticket	Dependency missing	Trouble_Ticket record type and dedicated layout are not yet present.

2. Standard CaseComment behavior

Field	Type	Write behavior	Architect evidence
ParentId	Reference	Createable; required	Links each comment to its Case.
CommentBody	Text area	Createable and updateable	Stores the rep's comment body.
IsPublished	Boolean	Createable and updateable	Unchecked is internal; checked is externally available.
CreatedById	Reference	System-set	Records who posted the comment.
CreatedDate	Date/Time	System-set	Records when the comment was created.

PERSONA EVIDENCE GATE

GreatPlainsUAT has 46 active GPC-Residential CRC Team users. The profile query alone does not prove that the intended rep can post and read Case Comments, so one named-user UI run is required.

Runtime evidence and UAT execution

Read-only evidence boundary

Boundary	Evidence
Metadata retrieved	Three named Case layouts across the two sandboxes; both successful retrievals recorded.
Schema checked	ParentId, CommentBody, IsPublished, CreatedById, and CreatedDate were verified live.
Available UAT Cases	20 Case records exist in GreatPlainsUAT; no Case record was selected or changed.
Comment baseline	GreatPlainsMerge and GreatPlainsUAT each contain zero CaseComment records.
Org write boundary	No records, metadata, activation, deployment, or check-only deployment were changed or run.

Named-rep UAT runbook

Step	Action	Expected result / evidence
1	Assign test context	Name one CRC Team rep and approve one UAT Case; record both identifiers.
2	Post internal comment A	Open Related > Case Comments > New; enter a unique body; leave Public unchecked.
3	Post internal comment B	Wait at least one minute, then add a second internal comment.
4	Verify audit trail	Confirm both entries display posting user and Created Date/Time.
5	Verify lifecycle order	Confirm the two comments appear in a consistent chronological sequence.
6	Capture sign-off	Save Case number, rep, timestamps, visibility result, ordering result, and screenshots.

Required approval gates

Gate	Required action	Owner	Evidence needed
1	Name the UAT rep and Case	QA / CRC lead	Provide the approved Case number and the named GPC-Residential CRC Team tester.
2	Run internal comment test	Named rep	Create two comments with Public unchecked and capture both saved records.
3	Verify acceptance evidence	QA	Confirm author, Created Date/Time, internal visibility, and chronological order.
4	Resolve external scope	Product owner	If external comments are in scope, approve a separate Public-checked test and external channel.
5	Resolve Trouble Ticket dependency	Release manager	Promote the Trouble_Ticket record type and layout separately if SCC-3655 must be tested on that record type.

Ready-to-paste architect response

STORY COMMENT

Architect review completed across GreatPlainsMerge and GreatPlainsUAT. Conditional Approval: SCC-3655 uses standard Salesforce Case Comments, and no SCC-3655-specific deployment is required. RelatedCommentsList is present on the GreatPlainsMerge Case-Case Layout and Case-Trouble Ticket layout and on the GreatPlainsUAT Case-Case Layout. Live schema confirms CommentBody and IsPublished are writable, while CreatedById and CreatedDate are system-set. Both sandboxes currently contain zero CaseComment records, so rep posting, author display, timestamp display, chronological order, and internal/external visibility remain runtime-pending. GreatPlainsUAT has 20 Cases and 46 active GPC-Residential CRC Team users, but no named tester or approved Case was supplied. Complete the five gates above before final story approval. If testing must use a Trouble Ticket, promote that separate record type and layout prerequisite first. No org data, metadata, activation, or deployment changes were made.
