

[SCC-3655](#)

Case Comments - Internal

Description

Use standard Salesforce Case Comments so reps can post and read case updates. Leave the Public checkbox unchecked for internal-only comments; select it only when a comment is intended to be externally available.

As A

Rep

I Want

to be able to post and read comments on different tickets our outages So that - I know what the latest update is on the case and can provide information to customers.

Acceptance Criteria

Acceptance criteria:

- A comment is internal when the standard Public checkbox is unchecked; no custom Internal field is used.
- Salesforce automatically records the comment Created Date/Time.
- Salesforce automatically records the user who posted the comment.
- The Case Comments related list displays multiple comments in chronological order throughout the Case lifecycle.

Architecture

Solution Review

Use standard Salesforce Case Comments. The standard IsPublished field is the Public/Published checkbox in the user interface: unchecked means internal-only; checked means externally available. No custom field, trigger, Flow, or component is required.

Deployment

- Disposition: no SCC-3655-specific deployment is required.

- GreatPlainsMerge (sandbox 00DEa00000GkAsHMAV): RelatedCommentsList is already present on Case-Case Layout and Case-Trouble Ticket.
- GreatPlainsUAT (sandbox 00DEa00000FZILBMA1): RelatedCommentsList is already present on Case-Case Layout.
- Dependency: GreatPlainsUAT does not yet contain the active Trouble_Ticket Case record type or Case-Trouble Ticket layout. That broader Trouble Ticket prerequisite must be promoted separately before SCC-3655 can be tested specifically on Trouble Ticket records.
- Read-only review completed 26 August 2026. No Salesforce records, metadata, activation, or deployment changes were made.

Testing Recommendation

1. Sign in to GreatPlainsUAT as a named rep (recommended persona: GPC-Residential CRC Team) and open an approved UAT Case.
2. Open the Related tab, locate Case Comments, and select New.
3. Enter a uniquely labeled internal test comment, leave Public unchecked, and save.
4. Add a second internal comment at least one minute later.
5. Confirm both comments display the posting user and Created Date/Time and appear in chronological order.
6. If external visibility is in scope, add a separate approved test comment with Public checked and verify it through the approved external test channel.
7. Record the Case number, rep, timestamps, expected visibility, actual visibility, and screenshots in the SCC-3655 test evidence.

Runtime status: pending. Both GreatPlainsMerge and GreatPlainsUAT currently contain zero CaseComment records, so posting, author display, ordering, and internal/external visibility were not proven by this read-only review.

Technical Documentation

Libraries/Packages Used

None

APIs

None

Triggers or Automations

None

New or Updated Objects/Fields

None. Standard CaseComment fields used: ParentId, CommentBody, IsPublished, CreatedDate, and CreatedById.

Components

Standard Case Comments related list (metadata name RelatedCommentsList); no custom component.

Settings Modifications

None for SCC-3655. The required standard related list is already present on the verified Case layouts.

Error Logging

None

Temporal Changes

None
