Case Comments - Internal

Description

Add a description...

As A

Rep

I Want

to be able to post and read comments on different tickets our outages So that - I know what the latest update is on the case and can provide information to customers.

Acceptance Criteria

Comments are identified as Internal (see Architecture tab for note to use "Public" checkbox for this purpose instead of a custom field" Comments are timestamped Date/Time

Comments show who posted the comment/update Comments are in chronological order so i can view multiple comments throughout the lifecycle of the case

Architecture

Solution Review

This should be standard out of the box functionality with Case Comments. We should use the "Public" field to note what comments are available externally and unchecked if only internally.

Deployment

Testing Recommendation

1.From the app launcher open any case 2.click on related list 3.look for case comments and click new 4.In the Body - you can add comments.
