

PR REVIEW

SCC-4486 | Skip Book Appointment & Drop Tasks

Great Plains | OmniStudio orchestration peer review

Review type	PR / peer review only - no IT or UAT execution
Scope	5 OrchestrationItemDefinition DataPacks 9 named files
Source evidence	GreatPlainsDevA 00DEa00000Fc086MAB Vlocity CMT 900.650.3.1
Decision	Approve with Comments - live configuration logic verified
Boundary	No PR approval/comment, deployment, activation, record write, or org metadata change

PR DECISION

Approve with Comments. GreatPlainsDevA proves that all five Internet Plan definitions use the authoritative Account Segment value, retain their existing conditions, and keep Skip Branch false. No blocking condition-logic issue was found. The actual nine-file PR patch still needs a repository-level identity and ParentKeys check before merge.

Acceptance and PR outcome

#	Review scope	Result	Evidence
1	Five named items	Pass	Exactly five matching ManualTask definitions exist in Internet Plan; same-name CRC/FSL records were excluded from the review.
2	MDU Tenant signal	Pass	Order.Account.Segment__c is a restricted Account picklist path; MDU Tenant is an active value and is populated on DevA accounts/orders.
3	Automatic Skipped design	Pass	Each live ConditionData tree has one exact Segment != MDU Tenant clause under the top-level AND, making the item condition false for that segment.
4	Existing behavior	Pass	Book Appointment retains appointment-status logic; the four drop tasks retain installation-method, facility-type, and product gates.
5	Downstream continuation	Pass	IsSkipBranch is false on all five items and the Internet Plan dependency chain remains present.
6	PR packaging	Comment	The live records verify deployed DataPack state; the actual five DataPack.json and four ParentKeys.json patches were not available for line-level review.

Condition and dependency design

The DevA implementation preserves every existing execution condition and adds one explicit non-MDU gate. For an Account whose Segment is MDU Tenant, the additional inequality evaluates false and the item is designed to enter Skipped state while the dependency graph remains intact because Skip Branch is false.

PR findings and reviewer comments

Result	Finding	Reviewer evidence / action
Pass	Authoritative discriminator	The implementation correctly uses Order.Account.Segment__c with the active restricted-picklist value MDU Tenant; it does not depend on nullable MDU identifier strings.
Pass	Condition direction	The != operator makes the full top-level AND condition false for MDU Tenant, which is the correct direction for an automatic Skipped state.
Pass	Existing-condition preservation	The original appointment or drop gates remain present. No live evidence shows that the SCC-4486 change replaced the existing boolean tree.
Pass	Dependency safety	IsSkipBranch remains false. Book Appointment still gates Triage, Welcome Email, and Create WOLI; the drop chain continues through Capture Tech Details.
Comment	Repository diff and ParentKeys	Before merge, confirm the PR is limited to five DataPack.json and four ParentKeys.json files, keeps stable keys, and contains no environment-specific record IDs.
Comment	Blank Segment behavior	Account.Segment__c is nullable. The PR logic is appropriate, but the normal-order expectation for blank Segment should remain covered by the team's separate test process.
Comment	Product relationship paths	Install Drop uses Product2.ProductCode; the other three drop definitions use vlocity_cmt__Product2Id__r.ProductCode. Preserve this pre-existing distinction unless separately justified.
Pass	No code expansion	No Apex, Flow, trigger, API, field, or permission change is required for this story. Reject unrelated automation or schema changes in the PR.

REVIEWER DISPOSITION

No blocking code or live configuration defect was found in GreatPlainsDevA. Approve with Comments, subject to a final repository check that the nine declared files faithfully represent this verified state.

Five-DataPack live evidence

DataPack	Observed DevA condition	Result / GlobalKey
Book Appointment	Appointment status + Segment != MDU Tenant	Pass Skip Branch false 86d713dd-cd8a-7c69-091f-d3d2f4f5f4a9
Triage, Prep-Work & Sitewalk	Install method + facility + product + Segment guard	Pass Skip Branch false 01c083d3-0a02-24ec-f2a4-1e4a1fee347e
Notify 811	Install method + facility + product + Segment guard	Pass Skip Branch false 274e769c-e9a9-ec1f-d782-d4fa8ed280f4
Install Drop	Install method + facility + Product2.ProductCode + Segment guard	Pass Skip Branch false ce652191-615d-84a5-22aa-6ba800141153
Splice and Cutover Drop	Install method + facility + product + Segment guard	Pass Skip Branch false 409ef12f-c6b1-06b7-a79e-655e04fad8da

DataPack and ParentKeys controls

Control	Peer-review expectation
Definition identity	All five records are Internet Plan / ManualTask definitions using the orderItems node. The deprecated Condition field is null.
ConditionData	All five use a top-level AND and contain exactly one MDU guard with picklist, field-OrderItem, !=, and MDU Tenant tokens.
Dependencies	Internet Plan links remain: Book -> Triage / Welcome Email / Create WOLI; Triage -> Notify 811 -> Install Drop -> Splice -> Capture Tech Details.
ParentKeys	Four ParentKeys source files are declared by the ticket but are not separately represented as Salesforce records. Verify them in the actual PR patch.
Change history	All five Internet Plan definitions were modified by Naveen Kumar on 25 August 2026; same-name CRC/FSL definitions are separate and unchanged by this review.
Scope discipline	No Apex, Flow, trigger, schema, permission, implementation reference, or Skip Branch change is needed for SCC-4486.

PR-ONLY BOUNDARY

This is a PR/configuration review only. Read-only DevA schema and record evidence was inspected, including existing MDU Tenant orders. No IT test, UAT execution, orchestration run, deployment validation, activation, or org write is claimed.

Reviewer completion checks

#	Review check	Status	Evidence / final action
1	Five live definitions	Pass	Correct Internet Plan records, exact MDU guard once per item, original gates retained.
2	Tenant discriminator	Pass	Order.Account.Segment__c; restricted picklist; active exact value MDU Tenant.
3	Branch and dependency safety	Pass	IsSkipBranch=false on all five and the expected Internet Plan dependency records remain.
4	Nine-file PR scope	Review comment	Confirm exactly five DataPack.json plus four ParentKeys.json files and no unrelated regenerated JSON.
5	Key and ID integrity	Review comment	Match the five GlobalKeys above; ParentKeys must use stable keys and exported files must not introduce DevA record IDs.
6	Final disposition	Approve with Comments	No blocking live logic issue; complete the repository-only checks before merge.

Ready-to-paste PR review response

PR COMMENT

PR review completed for SCC-4486 against GreatPlainsDevA (00DEa00000Fc086MAB) - Approve with Comments. All five Internet Plan ManualTask definitions contain the exact top-level guard Order.Account.Segment__c != 'MDU Tenant'. Book Appointment retains its appointment-status condition, the four drop tasks retain their installation, facility, and product conditions, and IsSkipBranch remains false on every item. The expected Internet Plan dependencies are also present, so no blocking code or live configuration issue was found. Before merge, confirm the PR contains only the five DataPack.json and four ParentKeys.json files, matches the verified GlobalKeys, preserves stable ParentKeys, and introduces no DevA record IDs or unrelated JSON churn. No Apex, Flow, trigger, schema, or permission change is required. This was PR review only: no IT/UAT execution, deployment, activation, orchestration run, record write, or metadata change was performed.
