

[SCC-3387](#)

Create "Outage" Ticket using Incident Object

Description

This story is to define the base layout and required fields needed on the new case that will be used to track outages.

As A

a NOC Rep

I Want

to manually create an outage ticket So that I can manage widespread service disruptions

Acceptance Criteria

Use the incident object NOC Rep can create outage ticket from dedicated "New Outage" button (standard New on Incident should suffice) Outage ticket type is distinct from standard trouble tickets (separate object should suffice) Required fields include: Affected Area/Region (Text) Equipment/Facility ID (Text), Estimated Customers Impacted (Numeric no decimals), Outage Start Time - Use Detected Date Time field (Date/Time) NOC Ticket Number Reference (Text) Estimated Time of Restoration (ETR) in hours Outage 'Severity Level' can be set, can we use existing Impact field and update values to (Minor, Major, Critical) NOC Rep can add detailed outage description and cause, can we use Description field? (if known) System timestamps outage creation for reporting Queue and Assignment Create Queue called "NOC" for Incident object. Outage ticket is automatically assigned to NOC queue

OH Requirement ID Field

Deployment

Testing Recommendation

From the app launcher open Incidents 1.Click on New 2.You'll find all the new fields Affected Area/Region (Text) Equipment/Facility ID (Text), Estimated Customers Impacted (Numeric no decimals), Outage Start Time - Use Detected Date Time field (Date/Time) NOC Ticket Number Reference (Text) Estimated Time of Restoration (ETR) in hours 3.Fill all the required details and save the incident 4.It will assign the Incident Owner as NOC Queue.
