Update Fiber Installation Method field - Premise, Service Appointment, and Work Order (Make Global Picklist and Cleanup Picklist Values)

General

Description

In order to stay in sync with allowed values in Vetro, we should make the Fiber Installation Method picklist on Premise, Service Appointment, and Work Order a global picklist. By default, global picklists values are “restricted” which is what we want.

Picklist Values should be:

Aerial

Buried

Conduit

Temporary

Inactivate and remove “Fixed Wireless” and “Unknown” picklist value.

Business process note: If values ARE ever added to Vetro for Fiber Installation Method we will HAVE to update the SF side before using the value on records or else this will break and cause records to not be created. (cc: @Bryan Hayashi)

As A

Service Account

I Want

to create work order and service appointment records with correct values related specifically to Fiber Installation Method.

Acceptance Criteria

Fiber Installation Method field on Premise, Service Appointment, and Work Order should be a global picklist with the values: Aerial, Buried, Conduit, and Temporary.
