(edited)

Hello @David Okolo , @Janaki Mani has caught an issue in QA (SCC-4568) with a field not being present on the page layout for this feature. She was able to see this working as expected in the GpcdevA org. Additionally she was able to see that this was not working in the merge org (where developers are supposed to smoke test their changes to ensure the package deployed correctly).

Additionally, the technical documentation tab on the story does not have the components section filled out. Every single story through our pipeline should have the components included. Could you please meet with Danny and get this fixed? Thank you!

CC: @Joyce Scigo @Janaki Mani @Adam Harp @Danny Perez
