

PR REVIEW

SCC-4485 | Consumer Account GL Classification

GreatPlainsDevA | OmniStudio implementation and merge-readiness review

Environment	GreatPlainsDevA 00DEa00000Fc086MAB Sandbox
Review date	28 August 2026
Evidence	Live OmniStudio configuration Account schema Aggregate Account read-back
Decision	Changes Requested - logic aligns; runtime/version gate remains
Boundary	PR review only; no deployment, activation, account creation, or org change

PR DECISION

Changes Requested. The acceptance-criteria logic is present in DevA, but AccountCreation v1 is inactive while active pipeline v5 invokes it. Resolve or prove that runtime/version state, attach the actual PR or DataPack diff, and provide one post-change execution result before merge approval.

Finding summary

Severity	Location	Result	Reviewer finding
P0	AccountCreation v1	Blocker	The only Data Mapper record is inactive; runtime resolution was not executed during this read-only review.
P1	SQ/OrderPipeline v5	Verified	Active Consumer action supplies Residential, Consumer, and Residential fallback inputs.
P1	MDU classification	Verified	Formula detects documented MDU building types or Type = Unit and returns MDU Tenant.
P1	Account mappings	Verified	All three target Account fields have enabled mappings and valid picklist values.
P1	PR evidence	Blocked	No PR URL, branch, commit, or exported DataPack diff was supplied for line-by-line review.

Implemented path and remaining gate

DevA now classifies the documented Place variants inside AccountCreation, maps the derived values to the Consumer Account, and preserves Residential fallback behavior. The outstanding gate is evidence that the inactive Data Mapper is the version executed by active SQ/OrderPipeline v5.

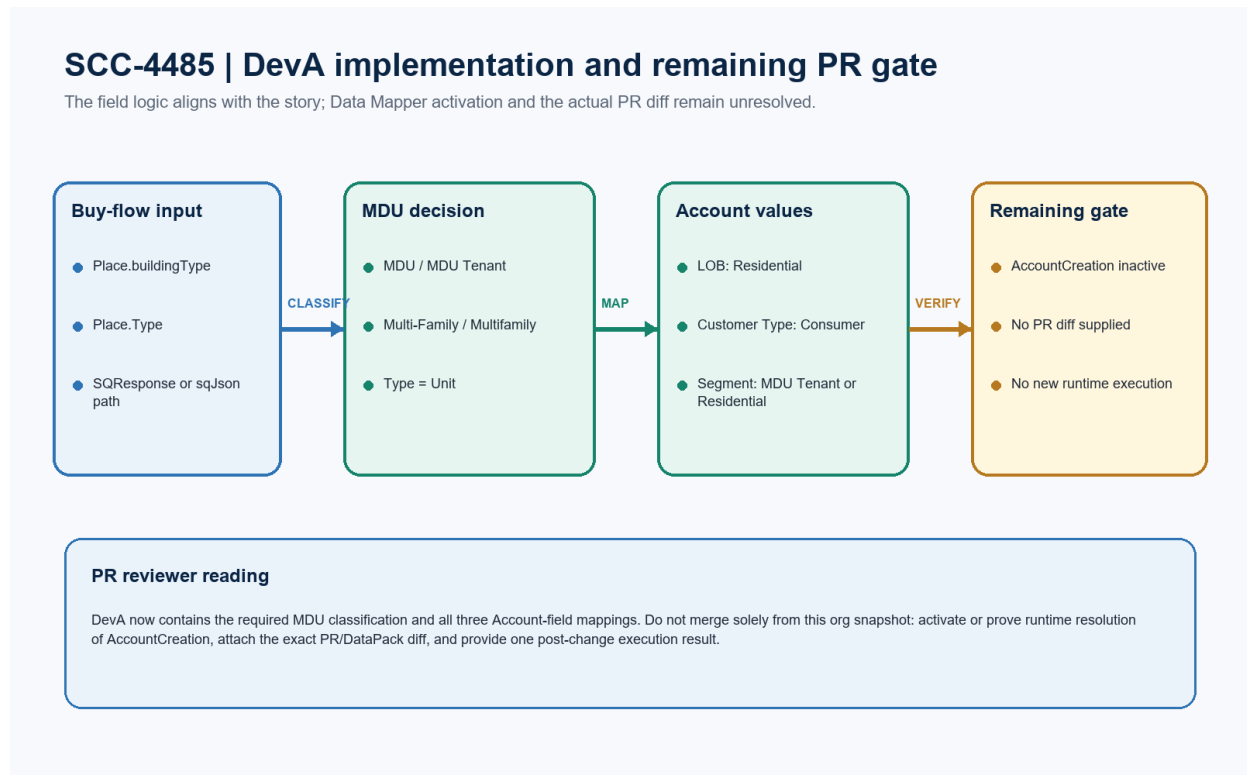

Figure 1. SCC-4485 DevA implementation and remaining PR gate

REVIEWER INTERPRETATION

The implementation correctly centralizes Segment classification in AccountCreation and keeps the Consumer action explicit. Salesforce guidance requires an active Data Mapper for runtime use when versioning is enforced; DevA exposes AccountCreation as inactive, so the PR must remove that ambiguity.

Detailed PR findings

ID	Severity	Component / location	Evidence	Reviewer action
PR-01	P0	AccountCreation v1 state	The only AccountCreation Load record is IsActive = false, last modified 28 August 2026 by API Service. Active SQ/OrderPipeline v5 references it by bundle name.	Activate the intended Data Mapper version, or attach runtime/versioning evidence proving this exact inactive record resolves and executes safely after deployment.
PR-02	P1	AccountCreation > SegmentValue	The enabled formula recognizes MDU, MDU Tenant, Multi-Family, Multifamily, or Type = Unit across SQResponse and sqJson paths; otherwise it uses Segment or Residential.	No acceptance-criteria change required. Preserve this formula and its SegmentValue -> Segment__c mapping in the PR diff.
PR-03	P1	AccountCreation > Customer Type	An enabled formula returns Consumer for the Consumer record type and CustomerTypeValue maps to Customer_Type__c.	No acceptance-criteria change required. Keep the Consumer-only guard and mapping together in the exported component.
PR-04	P1	SQ/OrderPipeline v5	CreateConsumerAccount is active and passes LineofBusiness = Residential, CustomerType = Consumer, and Segment = Residential under the Consumer record-type branch.	Preserve the Consumer-only condition and prove v5 is the version included and activated by the deployment mechanism.
PR-05	P2	Input contract maintainability	CustomerType = Consumer is passed by the pipeline, but AccountCreation derives CustomerTypeValue from record type rather than consuming the CustomerType input.	Document the intentional record-type derivation or remove the unused input in a controlled follow-up; do not change Consumer behavior in this story.
PR-06	P1	PR artifact	No repository PR URL, source branch, commit, or exported DataPack diff was available.	Attach the exact SQ_OrderPipeline/SQtoOrder Pipeline and AccountCreation diff for formal approval.

REVIEW CONCLUSION

The earlier Merge-based findings about missing Customer Type and missing MDU logic do not apply to DevA. PR-01 is the remaining configuration blocker; PR-06 prevents line-by-line PR approval.

Acceptance and merge checklist

Criterion	Expected	Result	Evidence
Line of Business	Residential	Verified	Pipeline input maps to Line_of_Business__c.
Customer Type	Consumer	Verified	Consumer formula maps CustomerTypeValue to Customer_Type__c.
MDU Segment	MDU Tenant	Verified	Documented building types and Type = Unit are covered.
Standard Segment	Residential	Verified	Non-MDU path falls back to input Segment or Residential.
Existing Accounts	Unchanged	Verified	Account Id mapping is disabled; the Data Mapper remains create-only.
Service Account	Unchanged	Verified	Service action does not pass the three Consumer classification inputs.

Required before merge

#	Merge check	Status
1	Resolve AccountCreation inactive status or prove runtime/version resolution	Blocked
2	Attach exact PR or exported DataPack diff	Blocked
3	Show one post-change MDU buy-flow execution result	Pending
4	Show one post-change standard Residential execution result	Pending
5	Confirm downstream package activates SQ/OrderPipeline v5 and intended Data Mapper	Pending

SCOPE NOTE

These are PR evidence and configuration gates. No deployment steps or execution instructions are included in this review.

Review evidence and limitations

Evidence source	Confirmed result
Target org	GreatPlainsDevA Great Plains Communications 00DEa00000Fc086MAB Sandbox
Active pipeline	SQ / OrderPipeline SQtoOrderPipeline v5 active 7 active elements
Data Mapper	AccountCreation Load v1 inactive 49 items modified 28 August 2026
Account fields	Line_of_Business__c, Customer_Type__c, Segment__c; required picklist values exist
30-day outcomes	17 Consumer Accounts: 2 expected MDU, 4 expected Residential, 11 legacy blank Customer Type
Today	No Consumer Account was created today; no post-change runtime result exists in the reviewed data
Version scan	SQtoOrderPipeline v1-v5 reviewed; only v5 is active; v4-v5 carry SCC-4485 inputs

REVIEW LIMITATION

The two MDU outcome records predate today's component modification timestamps and cannot prove the currently deployed version executed. No source PR diff or new buy-flow transaction was inspected or run.

Ready-to-paste PR review comment

PR COMMENT

Changes Requested for SCC-4485. DevA now contains the required logic: active SQ/OrderPipeline v5 passes Residential / Consumer / Residential defaults for the Consumer branch, AccountCreation classifies the documented MDU address variants as MDU Tenant, and all three Account fields are mapped. The remaining blocker is version/runtime state: the only AccountCreation v1 record is inactive while the active pipeline invokes it by bundle name. Please activate the intended mapper or provide evidence that this exact version resolves and executes under the org's runtime configuration. Also attach the exact PR/DataPack diff and one post-change MDU plus standard Residential execution result. The prior findings that Customer Type and MDU logic were missing do not apply to DevA. No deployment, activation, account creation, or org write was performed during this review.
